Anatomy

Study programme:	**Medical Studies in English (R)** [Sveučilišni integrirani prijediplomski i diplomski studij]
Department:	**[Zavod za anatomiju]**
Course coordinator:	**izv. prof. dr. sc. Arbanas Juraj, dr. med.**
Year of study:	**1**
ECTS:	**22**
Incentive ECTS:	**0 (0.00%)**
Foreign language:	**Possibility of teaching in a foreign language**

Course information:

The course Anatomy is a compulsory course in the first year of the Integrated Undergraduate and Graduate University Study of Medicine in English. It consists of 56 hours of lectures, 40 hours of seminars, and 145 hours of practicals - overall 241 hours (22 ECTS).

Course objective

The basic aim of Anatomy is to provide the acquisition of knowledge about morphological and structural organization of the human body through the study of topographic and systematic anatomy. In detail, the course content encompasses the fundamentals of osteology, sindesmology, myology, as well as the basics of angiology and neurology. Additionally, the course covers the examination of bones, articulations, and muscles of the upper and lower limbs, as well of the head and trunk. Furthermore, detailed knowledge is elucidated regarding the topographical anatomy of various regions, such as the head and neck, including the regio temporalis, regio parotideomasseterica et retromandibular, regio palpebralis, regio faciei anterior (external nose, nasal cavity, and paranasal sinuses), fossa infratemporalis et pterygopalatina, cavum oris et trigonum submandibulare, trigonum caroticum, spatium parapharyngeum, regio colli media, regio colli lateralis, regio pectoralis et fossa axillaris, as well as the topographical anatomy of the upper limb (muscles, vessels, nerves, and lymph vessels), thorax, abdomen, lesser pelvis (including ventral abdominal wall and inguinal region, peritoneum and mesenteries, peritoneal cavity, extraperitoneal spaces, and the lesser pelvis), and the lower limb (muscles, vessels, nerves, and lymph vessels). In addition, the course covers the morphology of sensory organs, the spinal cord, spinal nerves, the brain, cranial nerves, brain vasculature, and meninges. Each student must obtain the skill in recognizing structures on the human cadaver specimen and the ability to use relevant anatomical nomenclature.

Course content:

General anatomy: basic principles of osteology, sindesmology, myology, angiology and neurology. Principles of organ structure. Structure and function of serous membranes. Anatomical nomenclature, main planes and axes in the body orientation.

Special anatomy: systemic and topographic anatomy of the upper and lower limb, cranium, head and neck, thorax, abdomen and pelvis. Morphology of the brain and spinal cord.

Course learning outcomes

I. Cognitive domain – knowledge

After having passed the Anatomy course, students should be able to:

1. define and choose adequate planes and axes for anatomical orientation

2. describe and explain the arrangement and position of organs in the body and their innervation and irrigation

3. describe, explain and connect general principles in the structure of organs with their function

4. describe and explain the systematic and topographical anatomy of the upper and lower extremities

5. define and explain the structure and relationships in the skeleton of the head

6. describe and explain the morphology of the central nervous system

7. define, describe and explain the systematic and topographical anatomy of the head and neck

8. describe and explain systematic and topographical anatomy of the chest, abdominal and pelvic cavity

9. demonstrate and self evaluate structures of human body on anatomical specimens

II. Psychomotor domain – skills

After having passed the Anatomy course, students should acquire the skills to identify and demonstrate anatomical structures on cadavers, as well as the ability to draw conclusions regarding the interrelationships of individual organs and structures within specific topographical regions.

Course design

For practicals and seminars, students are obliged to prepare in advance, because these parts of the course are designed as “flipped classrooms”. Seminars and practicals are designed to give students the opportunity to engage in the skillful articulation of anatomical structures, as well as to discuss the significance of anatomical knowledge within their future vocation as medical practitioners. Throughout the practical sessions, the instructor supervises and assesses the active involvement of students in carrying out the assigned exercises. Seminars demand dynamic discussions on the designated topics. During the course, knowledge is consistently evaluated through four periodic assessments (midterm exams), each

comprising of a practical segment on specimens, as well as an oral component. The schedule and course content are predetermined by the curriculum.

List of assigned reading:

Friedrich Paulsen, Tobias M. Böckers, Jens Waschke: Sobotta Anatomy Textbook, 1st Edition
Atlas of Anatomy (Sobotta or Gilroy)

List of optional reading:

1. Richard L. Drake, A. Wayne Vogl, Adam W.M. Mitchell: Gray's Anatomy, third edition
2. Kieth L. Moore: Clinically Oriented Anatomy, seventh edition, 2013.

Examination Manner:

Only students who have achieved at least 25 points during the course can take the final exam in Anatomy. Students with less than 25 points earned during the course must enroll in the course Anatomy again in the next academic year. If a student obtains 25 grade points during classes, but without passing one or more practical parts of midterm exams, he/she must approach the practical parts of those midterm exams during the final exam. In that case for the passing of the missing practical parts he/she will not be awarded with 2 points. Passing all practical parts is one of the prerequisites for taking the final exam. In case the student does not pass the practical during the final exam, the exam is graded as insufficient. The final exam is oral.

The final exam is evaluated according to the scheme:

Grade	Points
Excellent (5)	50
Very good (4)	41
Good (3)	33
Sufficient (2)	25

The final grade consists of the sum of points gained during the course and at the final oral exam. Grading within the ECTS grading system is carried out with an absolute distribution, i.e. based on the final achievement:

A – 90 - 100% EXCELLENT (5)

B – 75 - 89,9% VERY GOOD (4)

C – 60 – 74,9% GOOD (3)

D -- 50 - 59,9% SUFFICIENT (2)

Final exam dates	
1.	19.06.2026.
2.	03.07.2026.
3.	17.07.2026.
4.	04.09.2026.
5.	18.09.2026.

Curriculum:

Lectures list (with titles and explanation):

L1. Overview of the executive curriculum, and student obligations.

Overview of the executive curriculum, and student obligations.

L2: Introduction to anatomy. Architecture of the human body.

Define anatomy as a science. Define subdivisions of the anatomy. Define regional and systemic anatomy.

L3: Anatomical axes and planes.

Explain the standard anatomical position, anatomical planes, axses and terms for location and orientation.

L4: Bones of the shoulder girdle.

Describe clavicula, scapula and humerus.

L5. General syndesmology.

Define syndesmology as an anatomical discipline. Define the types of junctions between skeletal elements. Explain the division of synarthroses: syndesmoses, synchodroses, synostoses.

L6: General syndesmology.

Explayn division of diarthroses. Describe characteristical features, obligatory and accessory structures of true joints.

L7. General myology.

Define myology as an anatomical discipline. Define smooth, cardiac, and skeletal muscle. Define and describe skeletal muscles according to the shape and number of tendons. Describe the structure of skeletal muscle: perimysium, endomysium, epimysium. Define tendons and muscle belly. Describe the role, structure, and function of tendons. Describe and define the attachments (origin, insertion) of muscles.

L8. General myology.

Divide the types of skeletal muscles. Define the auxiliary structure of the muscles, i.e. the connective sheath or fascia. Describe the osteomuscular lodges. Describe the muscle and tendon spindle. Describe the innervation of the muscles.

L9. General neurology.

Define the nervous system. Define functional and morphological divisions of the nervous system. Define the peripheral nervous system and describe the structures that make it up: nerves and ganglia.

L10. General neurology.

Describe neuron. Describe the composition of the nervous tissue. Describe spinal nerve.

L11. General angiology.

Define angiology as an anatomical discipline. Explain the structure and anatomical characteristics of blood vessels. Describe the small and large blood circulation. Outline the main arteries and veins. Describe lymphatic vessels and nodes. Describe the lymphatic organs.

L12. Topographically important aspects of the arm.

Describe the trigonum clavipectorale, axillary cavity, spaces and triceps groove, elbow (fossa cubitalis), carpal tunnel, and GUYON’s canal.

L13. Art. genus.

Describe and name the bones that make up the knee joint, describe the parts of the joints, learn the anatomical nomenclature for joint structures, describe the movements performed in the joint, and determine the axes of the movement and the plane in which it is performed.

L14. Hip joint mechanics. Muscles of the hip joint.

Describe mechanics of the hip joint. Analyze the function of the muscles involved in the ovement of the hip joint.

L15. Innervation of the lower extremity.

Describe plexus lubalis and plexus sacralis. Explain the course and area of innervation of the peripheral nerves of the lower extremity.

L16. Overview of the topography of the lower extremity.

Overview of the topography of the lower extremity.

L17. Overview of the axial skeleton.

Describe bones of the axial skeleton - shape, composition and function.

L18. Overview of the bones of the skull.

Describe general features of the bones of the skull.

L19. Bones of the viscerocranium.

Define and describe the bones of the viscerocranium.

L20. Cavities of the viscerocranium.

Describe the walls of the orbit, nosal, and oral cavity. Explain the relationships and communications of the cavities with other spaces of the head. Describe the paranasal sinuses and their connection with the nasal cavity.

L21. The spine. Joints between vertebrae. Joints between the head and the spine. Curves and movements of the spine.

Describe the spine as a whole. Describe and define individual groups of vertebrae and their characteristics. Describe and state the types of joints between the vertebrae and describe the mobility of individual sections of the spine. Describe the joints of the spine and the junction of the base of the skull with the spine. Define and describe the curves of the spine.

L22. General organization of the nervous system.

Describe and define the division and structure of the central nervous system. Describe the nerve cell, types of nerve cells, and supporting cells.

L23. Spinal cord, brainstem and cranial nerves.

Describe the spinal cord, medulla oblongata, pons and mesencephalon. Describe and define the cranial nerves.

L24. Cerebellum, hypothalamus and hypophysis.

Describe the cerebellum, hypothalamus and hypophysis.

L25. Telencephalon.

Tescribe the cerebrum, divide it into basic parts, and indicate their location.

L26. Ventricular system of the brain.

Describe the ventricular system, parts, walls, and communications. Describe the circulation of the cerebrospinal fluid.

L27. Meninges, dural sinuses and intracranial compartements.

Describe meninges, dural sinuses and intracranial compartements.

L28. Arteries of the brain and spinal cord.

Describe the arteries of the brain and spinal cord.

L29. Head and neck regions. Neck fascia.

Describe the anatomical boundaries of the head and neck. Describe the location, interrelationship, and boundaries between the topographic regions of the head and neck. Describe the neck fascia and its leaves and the lodges closed by the leaves of the fascia.

L30. Trigonum caroticum. N.IX. Art. carotis communis.

Describe the boundaries and contents of the trigonum caroticum. Describe the common carotid artery and its branches. Describe IX. cranial nerve.

L31. Overview of the innervation of the head and neck.

Describe the principles of sensory, motor, and parasympathetic innervation of the head and neck organs. Describe the innervation of the facial skin. Describe n. trigeminus from the exit, its path, and relations to the surrounding structures. Describe the division of the nerve into three main branches.

L32. N.V.-2, N.V.-3.

Describe n. trigeminus from the exit, its path, and relations to the surrounding structures. Describe the division of the nerve into three main branches. Describe each branch of n. trigeminus, the area of its extension and innervation.

L33. Examination of blood vessels of the head and neck. A. maxillaris. A. subclavia.

Outline the arteries and veins of the head and neck. Area of provision and irrigation. Describe maxillaris and subclavian arteries, their branches, area of supply, and irrigation.

L34. V. jugularis interna. V. subclavia.

Describe the deep and subcutaneous veins of the head and neck. Describe the internal jugular vein and the subclavian vein, their supply area, tributaries, and drainage area.

L35. The principle of structure of a hollow and parenchymatous organ. Examination of head and neck organs.

Define splanchnology as an anatomical discipline. Clearly show the position and communications of the visceral organs of the head and neck. Describe the principles of structure of hollow and parenchymatous organs.

L36. Head and neck lymph. Waldeyer's lymphatic ring.

Describe and name lymphatic vessels and regional lymph nodes. Define the area of lymph drainage for individual organs of the head and neck. Describe the tonsils that participate in the construction of Waldejer's lymphatic ring.

L37. Larynx. Phonation.

Show and describe the wall of the larynx, the communication openings, and the division of the cavity of the larynx. Describe the anatomical structures that participate in the construction of the larynx walls. Describe the motor, sensory and autonomic innervation of the larynx. Describe the mechanism of voice production and explain the function of the larynx muscles in voice production.

L38. Nervus vagus.

Describe n. vagus from the exit, its path, and relations to the surrounding structures. Describe the core n. vagus. Describe each branch of n. vagus and the area of its innervation.

L41: Internal ear.

Describe the bony labyrinth. Describe the membranous labyrinth. Identify the sensory surfaces of the membranous labyrinth and describe their position.

L42. N. statoacousticus.

Define and explain the position and role of the statoacoustic nerve. Describe nVIII nuclei.

L39. Eyeball - outer and middle eye leyer

Describe the shape and parts of the eye membranes: outer eye membrane and its parts (sclera and cornea), middle eye membrane and its parts (choroid, ciliary body, and iris).

L40. Eyeball - the inner membrane of the eye. Internal muscles of the eye. Humor aqeuosus.

Describe the shape and parts of the eye membranes: inner eye membrane (pigment layer and retina). Explain the significance and function of the smooth muscles of the iris and the ray body. Define the content of the eyeball. Describe the production, flow, and drainage of aqueous humor from the eyeball

L43: General Description of the Thorax. Lungs. Pleural Cavities. Pleura.

Describe the external shape and the external and internal borders of the trunk according to the adjacent parts of the body. Divide the body cavities into thoracic, abdominal, and pelvic cavities, and describe the boundaries between

them. Describe the serous membrane, and its sheets (parietal, visceral, and mesentery), and state the role of the serous membrane in organ fixation and its irrigation and innervation. Describe lungs and pleural cavities.

L44: General Description of the Thorax. Lungs. Pleural Cavities. Pleura.

Describe the external shape and the external and internal borders of the trunk according to the adjacent parts of the body. Divide the body cavities into thoracic, abdominal, and pelvic cavities, and describe the boundaries between them. Describe the serous membrane, and its sheets (parietal, visceral, and mesentery), and state the role of the serous membrane in organ fixation and its irrigation and innervation. Describe lungs and pleural cavities.

L45: Heart.

Describe the cardiac cavities and orifices, the flow of blood through the heart cavities and the mechanisms of opening and closing the heart valves using the valves.

L46: Heart.

Describe the cardiac cavities and orifices, the flow of blood through the heart cavities and the mechanisms of opening and closing the heart valves using the valves.

L47: Abdomen: General Description, Surface Topography – Nine-region Pattern,Walls, Abdominal and Peritoneal Cavity, Relation to Other Regions.

Describe the external shape and the external and internal borders of the abdomen according to the adjacent parts of the body. Define the abdominal cavity division into the peritoneal cavity and extraperitoneal spaces. Describe the peritoneum and its layers (parietal, visceral and mesentery). Describe the embryonic development of the organs in the abdominal cavity. Explain the main changes that take place in the process of development and the consequences that lead to the definitive placement of the organs in the peritoneal cavity.

L48: Abdomen: General Description, Surface Topography – Nine-region Pattern,Walls, Abdominal and Peritoneal Cavity, Relation to Other Regions.

Describe the external shape and the external and internal borders of the abdomen according to the adjacent parts of the body. Define the abdominal cavity division into the peritoneal cavity and extraperitoneal spaces. Describe the peritoneum and its layers (parietal, visceral and mesentery). Describe the embryonic development of the organs in the abdominal cavity. Explain the main changes that take place in the process of development and the consequences that lead to the definitive placement of the organs in the peritoneal cavity.

L49: Retroperitoneal Region: Posterior Abdominal Wall and Organs, Abdominal Aorta, Inferior Vena Cava, Lymphatic System.

Describe the posterior abdominal wall, describe and define reteoperitoneal space and content of the space. Describe abdominal aorta and vena cava inferior.

L50: Retroperitoneal Region: Posterior Abdominal Wall and Organs, Abdominal Aorta, Inferior Vena Cava, Lymphatic System.

Describe the posterior abdominal wall, describe and define reteoperitoneal space and content of the space. Describe abdominal aorta and vena cava inferior.

L51: Pelvis: General Description, Pelvic Walls and Floor, Pelvic Cavity

Describe the skeletal elements of the pelvic cavity, their joints and muscles. Describe the pelvic floor muscles. Describe the external and internal diameters of the pelvic cavity with special reference to the shape of the pelvic cavity in women. Describe the irrigation and lymphatic drainage of the walls and contents of the pelvis.

L52: Pelvis: General Description, Pelvic Walls and Floor, Pelvic Cavity

Describe the skeletal elements of the pelvic cavity, their joints and muscles. Describe the pelvic floor muscles. Describe the external and internal diameters of the pelvic cavity with special reference to the shape of the pelvic cavity in women. Describe the irrigation and lymphatic drainage of the walls and contents of the pelvis.

L53: External Genital Organs – In Men and in Women. Perineal region.

Describe and explain male and female external genital organs.

L54: External Genital Organs – In Men and in Women. Perineal region.

Describe and explain male and female external genital organs.

L55: Visceral Innervation of Abdomen – Sympathetic and Parasympathetic Parts of the Autonomic Division of the Peripheral Nervous System.

Describe and explain sympathetic trunks, preganglionic and postganglionic sympathetic fibres and visceral afferent fibres, splanchnic nerves, abdominal prevertebral plexus, parasympathetic innervation and the enteric system.

L56: Visceral Innervation of Abdomen – Sympathetic and Parasympathetic Parts of the Autonomic Division of the Peripheral Nervous System.

Describe and explain sympathetic trunks, preganglionic and postganglionic sympathetic fibres and visceral afferent fibres, splanchnic nerves, abdominal prevertebral plexus, parasympathetic innervation and the enteric system.

Seminars list (with titles and explanation):

S1: General osteology. (pg. 18-23).

Define general concepts of bone structure and function and name the parts of bones. Describe the specific types of bones.

S2: Types of joints according to the shape and type of movements in the joint. Shoulder joint. (pg. 11, 13-15, 25-26, 150-152)

Define the types of joints based on the number of movement axses, number of articulating skeletal elements, shape of the joint surfaces (spherical, cylindrical, ellipsoid...). Describe range of motion and types of movements. Describe joint surfaces, joint type, and movements in the shoulder joint.

S3. Function of a muscle in a joint movement. Agonist, antagonist, synergist. Auxiliary structures of muscle.

Define the role that muscles play in the locomotor apparatus. Explain the function of the muscles in the joint. Define contraction. Describe the terms agonist, antagonist, and synergist.

S4. Plexus brachialis. (pg. 174-184)

Analyze the composition of plexus brachialis for innervation of the upper extremitiy, roots, branches, composition of nerve fibers, and innervation area.

S5. Lymphatic vessels of the upper and lower extremity.

Describe the course and location of lymphatic vessels and lymph nodes of the upper and lower extremity. (Pg. 191-192, 245-246)

S6. Isolated bones of the cerebral part of the skull. Temporal bone – cavum tympani. Channels of the temporal bone.

Analyze the bones that make up the cerebral part of the skull. Describe the shape, basic features, main parts, and morphological characteristics of the frontal, sphenoid, temporal, and occipital bones. Describe the cavum tympani, define the shape of the space, and list the walls and their position. Describe the canals of the temporal bone.

S.7. Mandibula. Articulatio temporomandibularis. Teeth. Masticatory muscles.

Show, name, and describe the parts of the mandible. Describe the jaw joint (art. temporomandibularis). Show, name, and describe the differently shaped teeth (incisors, canines, premolars, and molars) of the permanent dentition. Describe the deciduous dentition. Outline and describe the muscles of mastication, and state their insertions and function.

S8. Classification of the CNS. General description of the brain and spinal cord.

S9. Cranial nerves and nuclei of the brainstem.

Describe cranial nerves and nuclei of the brainstem.

S10. Ventricles and cerebrospinal fluid. Circulation of cerebrospinal fluid.

Describe the ventricles of the brain. Describe the communication between the ventricles and the subarachnoid space and the circulation of the cerebrospinal fluid.

S11. Cranial nerves: N. glossopharyngeus (pg.454-455), N. vagus (pg.455-457), N. hypoglossus (pg.457-

458), N. accesorius (pg.457). Sympathicus of the head and neck.

Describe the nuclei in the brain stem, the types of fibers, the area of innervation, and the course and branching of the nerves for the innervation of the head and neck: nn. craniales (n. IX, n. X, n. XI, n. XII), and describe the cervical part of the truncus sympathicus.

S12. Nerves of the head and neck - N.III,N.V-1, N.VII., Ganglion ciliare, oticum, pterygopalatinum and submandibular.

Describe the nuclei in the brain stem, the types of fibers, the area of innervation, and the course and branching of the nerves for the innervation of the head and neck: nn. craniales (n. III, n.V-1, n.VII), and describe the parasympathetic ganglia of the head and neck, name their preganglionic and postganglionic fibers as well as the area of innervation.

S13. Parasympathetic innervation of head and neck. N. vagus. Parasymathetic ganglia.

Describe n. vagus from the exit, its path, and relations to the surrounding structures. Describe the core n. vagus. Describe each branch of n. vagus and the area of its innervation.

S15. Outer and middle ear.

Describe the parts of the external ear: pinna and ear canal and parts of the middle ear: eardrum, auditory ossicles and joints, mastoid cavities, and Eustachian tube. Discuss the sensory innervation of the skin and mucous membrane of the outer and middle ear and the motor innervation of the stapedius and tensor tympani muscles.

S14. Auxiliary organs of the eye. Blood vessels and nerves of the orbit.

Describe the eyelids, lacrimal apparatus, and eye muscles. Describe the nuclei in the brain stem, the types of fibers, the area of innervation, and the course and branching of the nerves of the orbit: n. II, n. III, n. IV and n. YOU. Describe the origin, course, collateral, and terminal branches of the a. ophthalmica. Describe the origin, course, and anastomoses of v. ophthalmicae superior.

S16: Conduction system and innervation of the heart, coronary blood vessels, veins and lymphatic of the heart (pg.269-274). Pericardium (266-267)

Describe coronary vasculature, cardiac veins and coronary lymphatics as well as recognize and show the right coronary artery, left coronary artery and coronary sinus. Explain and describe the cardiac plexus. Define margins of the heart and heart sounds. Describe pericardium.

S17: Abdominal Walls, Peritoneal Cavity, Boundaries and Content. Development of abdominal viscera. Serous membranes. (pg.303, 304, 310).

Describe the abdominal wall and peritoneal cavity. Define and describe the location of abdominal organs and their surface anatomy. Explain the development of the abdominal viscera. Describe the serous membrane and its main parts.

S18: Vessels and nerves of the abdominal cavity.

Describe the blood and lymphatic vessels of the abdominal cavity. Define the area of irrigation of individual organs of the abdominal cavity.

S19: Female internal genital organs.

Define the organs that form the female reproductive system. Describe the shape and structure of the ovaries, fallopian tubes, uterus and birth canal.

S20: Male internal genital organs.

Define the organs that form the male reproductive system. Describe the shape and structure of the testicles, epididymis, vas deferens, seminal vesicles, prostate and ejaculatory tubes.

Exercises list (with titles and explanation):

P1: Bones of the shoulder girdle. Humerus. (pg. 145-146, 150)

Students will orientate and describe bones, describe specific parts of bones and show each bone structure.

P2: Bones of the forearm. Structure and bones of the hand. (pg. 156, 159-160)

Orientate and describe bones, describe specific parts of bones and show each bone structure.

P3: Joints and ligament connections of the shoulder girdle. Shoulder girdle mechanics. Shoulder joint. Shoulder joint mechanics. (pg. 146-148, 150-152)

Students will describe the joint, its movement and function, articular surfaces, joint capsule, and joint accessories.

P4: Elbow joint. Joint connections between the forearm bones. Elbow joint and distal radioulnar joint mechanics. Joints of the hand. Hand-joint mechanics. (pg. 156-157, 160-164)

Students will describe the joint, its movement, and function, articular surfaces, joint capsule, and joint accessories.

P5: Shoulder girdle muscles. Shoulder muscles. Upper arm muscles. (pg. 148-150, 152-155, 157-159)

Describe the origin, insertin, and function of muscles. Note which joints the muscles cross and describe movements in these joints.

P6: Muscles of the forearm and hand. Auxiliary structures of the musculature in the area of the hand. (pg. 164-173)

Describe the origin, insertion and function of muscles. Note which joints the muscles cross and describe movements in these joints.

P7: Nerves of the upper extremity. (pg. 174-184)

Define nerve origin, path, branches, topography, and innervation area.

P8: Arteries of the upper extremity. Veins of the upper extremity. Lymphatic vessels of the upper extremity. Topographically important aspects of the arm. (pg: 184, 186-194) Review of upper extremity.

Define the origin of each blood vessel, its path, branches, topography, and irrigation area. Describe lymphatics of the upper limb and their drainage point. Describe the trigonum clavipectorale, axillary cavity, spaces and triceps groove, elbow (fossa cubitalis), carpal tunnel, and GUYON’s canal.

P9: Bones of the pelvis. Thigh bone. Bones of the leg. Bones of the foot. (pg. 199-201, 202-203, 209-210, 219-220)

Describe the pelvis and thigh bone and show each bone structure. Describe the tibia, fibula, talus and calcaneus, main characteristics of metatarsal bones and phalanges and show each bone structure.

P10: Pelvic joints and ligament attachments. Mechanics of the pelvic joints. Hip joint. Mechanics of the hip joint. Attachments between the tibia and fibula. Knee joint. Mechanics of the knee joint. Joints of the foot. Mechanics of the ankle joints. The arch of the foot. (pg. 201-202, 203-205, 211- 215, 220-224)

Describe the joint, its movement and function, articular surfaces, the joint capsule (synovial and fibrous membrane) and joint accessories. Show each joint structure.

P11: Muscles of the hip joint. Fascia lata and tractus iliotibialis. Muscles of the knee joint. Review of pelvic joints, hip joint and knee joint. (pg. 205-209, 216-218)

Describe the origin, attachment and function of muscles. Define joints the muscles cross and describe movements in these joints.

P12: Muscles of the lower leg and foot. Support facilities of the musculature in the region of the lower leg and foot. Review of knee and ankle joints. (pg.225-231)

Describe the origin, attachment and function of muscles. Define which joints the muscles cross and describe movements in these joints.

P13: Nerves of the lower extremity. (pg. 231-238)

Define nerve origin, its path, branches, topography and innervation area.

P14: Arteries of lower extremity. Veins of the lower extremity. Lymph vessels of the lower extremity. Topographically important aspects of the leg. (pg. 238-249)

Define the origin of each blood vessel, its path, branches, topography and irrigation area. Describe the fascia of the lower limb and the saphenous opening. Describe structures in the lacuna musculorum and lacuna vasorum, femoral triangle and adductor canal, gluteal region and the popliteal fossa. Describe the main points of surface anatomy of the lower limb.

P15: Inner surface of skull base (Basis crani interna): fossa crani anterior, media et inferior. Calvaria. (pg. 413-416)

Show, name and describe the bones that construct the inner surface of the base of the skull. Show the borders between the front, middle, and back cranial fossa. For each cranial fossa, show and describe the bones and parts of the bones that participate in the construction of the specific fossa. Show the communication openings and determine the cavities or regions they communicate with. Describe and show the bones or parts of bones that participate in the construction of the skull roof or calvary.

P16: External surface of the skull base (Basis cranii externa). (pg.416-418)

Show, name, and describe the bones that construct the outer surface of the base of the skull. Show the borders between the frontal, middle, and rear sectionss of the external skull base. For each section, show and describe the bones and parts of the bones that participate in its construction. Show the communication openings and determine the cavities or regions they communicate with.

P17: The cavities of the viscerocranium: orbita, cavitas nasi, cavitas oris. Mandibula. (pg.421 – 422, 495-498, 504)

Describe the bony structures of the orbital, nasal, and oral cavities. Show the major points of penetration, foramina, fissures, and impressions. Describe mandible.

P18: Lateral regions of the skull: fossa temporalis, fossa infratemporalis, and fossa pterygopalatina. Typical and atypical vertebral bones, the shape of the vertebral collumn, the ribs, sternum.

Describe the bony walls and communications of the lateral regions of the skull (fossa infratemporalis, fossa pterygopalatina, fossa temporalis). Describe vertebras, ribs and sternum.

P19: The external shape and internal structure of the spinal cord. N. spinalis.

Show and describe the external shape of the spinal cord. Show and describe the spinal nerves.

P20: The external shape and internal structure of the brainstem.

Show and describe the external form and internal structure of the medulla oblongata, pons, and mesencephalon.

P21: Cerebellum. The fourth ventricle.

Show and describe the external shape, parts, and internal structure of the cerebellum. Show the fourth ventricle and describe its walls.

P22: Diencephalon and the third ventricle. The hypophysis.

Show the external structure of the distinct parts of diencephalon as well as name some of the nuclei of the distinct parts of diencephalon. Show and describe the third ventricle. Describe the pituitary gland.

P23: Telencephalon, pallium, rhinencephalon, basal ganglia.

Show and describe the outer shape of the hindbrain. Show and describe the basal ganglia.

P24: The lateral ventricle. The meninges, blood vessels of the brain and spinal cord. Cerebrospinal fluid.

Show the lateral ventricle and describe its walls. Show and describe the meninges and blood vessels of the brain and spinal cord. Describe the circulation of the cerebrospinal fluid.

P25: Surface anatomy of the neck (pg.533-534), Regions of the neck and neck triangles (pg.534) , Musculoskeletal system of the neck (pg.534-541).

Show and describe the boundaries of the region, the content of the region and communications with neighboring areas.

P26: Cervical fascia and connective tissues spaces (pg.541-545). Regions of the neck and neck triangles (pg.534) - trigonum caroticum, spatium parapharyngeum. Nerves of the neck (pg. 550-557).

Show and describe the boundaries of the region, the content of the region, and communications with neighboring regions.

P27: Deep lateral facial region (pg.439-443)- Fossa infratemporalis. Fossa pterygopalatina. Masticatory muscles (pg.512-514).

Show and describe the boundaries of the region, the content of the region and communications with neighboring areas. Describe and explain the origin, insertion, innervation, and function of the masticatory muscles.

P28: Face and facial soft tissue (pg.428-436). Superficial lateral facial region (pg.436-439), Parotideomasseteric region. Retromandibular fossa.

Show and describe the boundaries of the region, the content of the region, and communications with neighboring regions.

P29: Superficial neck layer. Lateral triangle of the neck. Arteries of the neck: A. carotis communis, A. sublavia (pg. 545-548). Veins of the neck (pg. 548-550). Lymph nodes of the neck (pg. 557-559).

Show and describe the boundaries of the region, the content of the region and communications with neighboring regions.

P30: Scalp (pg.425-428), superficial neck layer, Back musculature - deep back muscles (pg. 105-112)

Show and describe the boundaries of the region, the content of the region, and communications with neighboring regions. Explain and define back musculature. Show superficial back muscles. Describe innervations and irrigation of back muscles.

P31: Oral cavity (pg. 503-505), Tongue (pg. 516-520), Floor of the mouth (pg. 524-526), Lymphatics (pg. 526), Salivary glands (pg. 526-530), Palate (520-523)

Define the walls of the oral cavity, the communication openings and the division of the cavity. Describe the anatomical structures that parcipate in the construction of the walls of the oral cavity. Describe motor, sensory and autonomic innervation of the walls. Show and describe the tongue and its structures. Explain and describe salivary glands and their openings in the oral cavity.

P32: Pharynx (pg. 575-579). Oesophagus.

Show the walls of the pharynx, the communication openings and the division of the cavity. Describe the anatomical structures that participate in the construction of the pharynx walls. Describe the motor, sensory and autonomic innervation of the pharynx walls.

P33: Nose overview (pg. 492), External nose (pg. 493-494), Nasal cavities (pg. 495-499), Paranasal sinuses (pg. 499-500), Vascular, lymphatic and nervous system of nose (pg. 500-502), N. olfactorius (pg. 444)

Show and describe the walls of the nasal cavity, the communication openings and the division of the cavity. Describe the anatomical structures that participate in building the walls of the nasal cavity. Describe the sensory and autonomic innervations of the mucous membrane of the nasal cavity. Describe and show the position of the paranasal cavities and show the communicating drainage openings into the nasal cavity. Explain n. olfactorius.

P34. Larynx, overview (pg. 563), Laryngeal skeleton (cartilages, ligaments, joints, muscles) (pg. 564-574), Thyreoid and parathyreoid glands (pg. 559-562)

Identify and describe the larynx, and define the composition of the larynx. Describe laryngeal cartilages, ligaments, and joints. Explain the cavity of the larynx, origin, insertion, innervation and function of the intrinsic muscles of the larynx. Understand the function of the larynx during respiration, phonation, effort closure and swallowing. Explain irrigation, lymphatic drainage and innervation of the larynx. identify and describe thyroid and parathyroid glands.

P35: Accessory apparatus of the eye.

Show and describe the upper and lower eyelids. Describe the conjunctive. Show and describe the structures of the lacrimal apparatus. Show and describe the external muscles of the eyeball, describe their function and innervation. Show the blood vessels and nerves of the orbit.

P36: Review and topography of head and neck. Anatomage.

Define head and neck organs and regions and their relationships. Explain the content of each region. Describe the

pathway of blood vessels and nerves regarding the regions and topography.

P37: Bony thorax and joints (pg.132-137). Muscles of the thorax. Innervation and irrigation of thoracic wall. Breast.

Describe the pectoral region and show the boundaries and contents of this region. Explain the breast and the function of the muscles of the pectoral region as well as recognize these muscles and show their origin and attachments to bones. Define and describe the ribs, and the sternum. Explain the movement and function of the intercostal joints. Explain and describe the attachment and function of the diaphragm and muscles of the thoracic wall.

P38. Trachea and lungs (pg.274-282), Pleura. Pleural cavities and breathing (pg. 289-290). Diaphragm (pg.87-90).

Describe the lung and show structures entering the hilum of the lung. Define the topography of the lungs, and branching of the bronchial tree. Define irrigation of lungs.

P39: Heart (pg.255-268). Pericardium

Describe the inner and outer surface of the heart, and explain the wall layers of the heart. describe and explain the pericardial sac. Describe the location, structure and function of the heart skeleton. Explain the structure, function and projection of the heart valves.

P40: Oesophagus and thymus (pg.282-288); Mediastinum (pg.288; 294-298). Content of the mediastinum

Define the superior mediastinum and its contents. Recognize and show the pulmonary trunk and ascending aorta. Describe the thymus, right and left brachiocephalic veins, superior vena cava, and arch of the aorta. Explain and describe the topography and irrigation of those blood vessels. Identify and explain vagus and phrenic nerves, their path, branches and innervation area. Describe and explain posterior mediastinum and its contents esophagus, thoracic aorta, azygos system of veins, thoracic duct and sympathetic trunk.

P41: Abdominal wall muscles, function, irrigation, innervation. Inguinal canal.

Describe and demonstrate the muscles, vessels and nerves of the abdominal wall. Describe and demonstrate the position and content of the inguinal canal. Describe the structures of funiculus spermaticus.

P42: Peritoneum. Abdominal organs: stomach, small and large intestine. (pg.340-343, 302-322)

Describe and demonstrate the structure, morphology and topography of the stomach, small and large intestine.

P43: Abdominal organs: liver, gallbladder, pancreas, spleen. (pg.322-340)

Describe and demonstrate the structure, morphology and topography of the liver, gallbladder, pancreas and spleen.

P44: Vessels and nerves of the peritoneal cavity. (pg.343-348)

Demonstrate the vessels and nerves of the peritoneal cavity.

P45: Posterior abdominal region: walls,kidney, ureter, suprarenal glands. (pg.93-98,352-361)

Explain and demonstrate the muscles, vessels and nerves of the posterior abdominal wall. Describe and demonstrate the position and branches of the abdominal aorta as well the structure, morphology, and topography of the kidney, ureter and suprarenal glands**.**

P46: Content and relations of female pelvis. Female internal genital organs, blood vessels, lymphatic and nerves. (pg.371-383)

Explain and describe the structure, morphology and topography of the rectum, bladder and urethra.

P47: Content and relations of male pelvis. Male internal genital organs.

Explain and demonstrate, name and describe the structure, and parts of male internal genital organs.

P48: External genital organs, blood vessels, lymphatic and nerves (pg.383-392) Perineal region. Review thorax, abdomen, and pelvis. (pg.402-406)

P48: Practical and theoretical revision of abdomen thorax pelvis.

Student obligations:

1. Regular attendance at classes (lectures, seminars, practicals).

2. Preparation for seminars and practicals by studying certain teaching content according to the implementation curriculum.

3. Use of protective equipment and instruments: mandatory use of a protective coat (white), anatomical tweezers and probe, optional use of protective latex gloves, mask, visor, or protective glasses and cap. Please properly dispose of the used work equipment in the designated place. Do not bring food and drink into the anatomy classrooms.

4. Careful handling of anatomical specimens and spaces where all forms of teaching take place.

5. It is forbidden to take photographs, take specimens outside the premises of the Institute of Anatomy, and alienate anatomical specimens and instruments of the Anatomy Department. A disciplinary procedure will sanction any misconduct.

6. Adherence to good academic behavior practices in dealing with fellow students, staff, and the Department of Anatomy teachers.

7. It is compulsory to follow and act by notifications and rules regarding attendance, absence, midterm exams, corrections of midterm exams, final exams, etc., which will be presented at the first lecture.

Exam (exam taking, description of the written/oral/practical part of the exam, point distribution, grading criteria):

Student grading will be conducted according to the current Ordinance on Studies of the University of Rijeka (approved by the Senate) and the Ordinance on Student Grading at the Faculty of Medicine in Rijeka(approved by the Faculty Council).

During the classes of Anatomy, a student can achieve a maximum of 50% (50 points) of their final grade, while the remaining 50% (50 points) of the grade is obtained at the final exam, as follows:

Midterm exam I - MS/MI	12 points
Midterm exam II - CR/CNS	12 points
Midterm exam III - CC	13 points
Midterm exam IV - AT	13 points
Total (classes)	**50 points**
Final exam	50 points
Total (course)	**100 points**

Midterm exams consist of a practical and an oral part. The practical part is evaluating the knowledge of anatomical specimens, assessing the practical skills of finding and showing anatomical structures, as well as knowledge of the Latin nomenclature of anatomical structures. On a practical part, students must **recognize at least 8 out of 10 structures** to pass. **The bone orientation is an obligatory practical question and can not be failed.** Passing the practical part of the midterm is a prerequisite for joining the oral part of the midterm and is awarded with 2 points. On the oral part the student receives the points depending on the grade. If a student does not approach the oral part after completing the practical part, the midterm is marked as an insufficient (1).

Midterm exams are evaluated according to the table:

	Practical part		Oral part		Toral pts.
		Pts.	Grade	Pts.	
MS/MI	Pass	2	Excellent (5)	10	12
			Very good (4)	8	10
			Good (3)	6	8
			Sufficient (2)	4	6
	Fail	0	Insufficient (1)	0	0
CR/CNS	Pass	2	Excellent (5)	10	12
			Very good (4)	8	10
			Good (3)	6	8
			Sufficient (2)	4	6
	Fail	0	Insufficient (1)	0	0
CC	Pass	2	Excellent (5)	11	13
			Very good (4)	8	10
			Good (3)	6	8
			Sufficient (2)	4,5	6,5
	Fail	0	Insufficient (1)	0	0

AT	Pass	2	Excellent (5)	11	13
			Very good (4)	8	10
			Good (3)	6	8
			Sufficient (2)	4,5	6,5
	Fail	0	Insufficient (1)	0	0

The regular Midterm exams will be held on the dates noted below after ending of the corresponding section. The exact time and the venues will be announced later.

- **MIDTERM 1 (upper and lower extremity) – 25/11/2025 and 27/11/2025**
- **MIDTERM 2 (cranium, CNS) – 27/01/2026 and 29/01/2026**
- **MIDTERM 3 (head and neck) – 14/04/2026 and 16/04/2026**
- **MIDTERM 4 (thorax, abdomen, and pelvis) – 02/06/2026**

Corrections of the midterm exams

A student can attend the midterm exam twice, with the second attempt being considered a retake (correction). It is not obligatory to attend the midterm on the regular date. Students can access the corrections of the midterm exams if they did not pass them, or are not satisfied with the obtained grade (points). If a student retakes the midterm exam because they are unsatisfied with the obtained grade points, only the grade points received at the retaken midterm exam(s) will be considered valid. Suppose the student passes the practical part of the midterm exam during the first attempt and fails the oral part he/she can retake the oral part of the midterm separately, without redoing the practical part.

The dates of retake midterm exams are as follows:

20.02.2026., 27.02.2026., 11.06.2025., 25.06.2026. and 09.07.2025.

On these dates, students can apply for any midterm exam regardless of the topic and apply for more than one retake exam on each date. Students are obligated to apply for the correction/s of the midterm exams. Suppose students apply for the correction/s of the midterm exam and decide that they will not be able to access it. In that case, they must personally cancel it (via email or in-person at the Department's administrator's office) at the latest until one working day before the term of the midterm exam/s until noon. If a student does not personally cancel the application for the correction/s of the midterm exams, and then doesn't approach the midterm correction/s, their final score for that/those midterm exams will be considered as failure.

Other notes (related to the course) important for students:

Academic honesty

It is expected that all students and teachers follow the code of academic honesty in accordance with the Code of Ethics for the students of the Faculty of Medicine at the University of Rijeka.

Consultations

Consultations are organized in agreement with the teacher.

Contact information

For all questions and concerns, students are encouraged to contact us by e-mail (mia.medic@medri.uniri.hr; juraj.arbanas@medri.uniri.hr) or personally.

COURSE HOURS 2025/2026

Anatomy

Lectures (Place and time or group)	**Exercises** (Place and time or group)	**Seminars** (Place and time or group)
01.10.2025		

L1. Overview of the executive curriculum, and student obligations.:
• [P08] (10:15 - 12:00) [1197]
  ○ A_341
 	
L2: Introduction to anatomy. Architecture of the human body.:
• [P08] (10:15 - 12:00) [1197]
  ○ A_341		

izv. prof. dr. sc. Arbanas Juraj, dr. med. [1197]		
06.10.2025		

L3: Anatomical axes and planes.:
• [P08] (12:15 - 14:00) [1197]
  ○ A_341
 	
L4: Bones of the shoulder girdle.:
• [P08] (12:15 - 14:00) [1197]
  ○ A_341
		S1: General osteology. (pg. 18-23).:
		• [P08] (14:15 - 16:00) [1197]
		  ○ Sem1
		• [P09 - NASTAVA NA ENGLESKOM JEZIKU] (14:15 - 16:00) [1600]
		  ○ Sem2

izv. prof. dr. sc. Arbanas Juraj, dr. med. [1197] · prof. dr. sc. Zoričić Cvek Sanja, dr. med. [1600]		
07.10.2025		

	P1: Bones of the shoulder girdle. Humerus. (pg. 145-146, 150):
	• [Zavod za anatomiju - Sala 1] (08:15 - 10:30) [2204] [3292]
	  ○ V1
	• [Zavod za anatomiju - Sala 2] (08:15 - 10:30) [1197]
	  ○ V2
	• [Zavod za anatomiju - Sala 1] (10:45 - 13:00) [2204]
	  ○ V3
	• [Zavod za anatomiju - Sala 2] (10:45 - 13:00) [2274]
	  ○ V4	

izv. prof. dr. sc. Arbanas Juraj, dr. med. [1197] · asistentica Balaban Branka, dr. med. [2204] · Uzelac Matija [3292] · Čulev Bojana, dr. med. dent. [2274]		
09.10.2025		

	P2: Bones of the forearm. Structure and bones of the hand. (pg. 156, 159-160):
	• [Zavod za anatomiju - Sala 1] (08:15 - 10:30) [1197] [3292]
	  ○ V1
	• [Zavod za anatomiju - Sala 2] (08:15 - 10:30) [2204]
	  ○ V2
	• [Zavod za anatomiju - Sala 1] (10:45 - 13:00) [1197]
	  ○ V3
	• [Zavod za anatomiju - Sala 2] (10:45 - 13:00) [2204]
	  ○ V4	

izv. prof. dr. sc. Arbanas Juraj, dr. med. [1197] · asistentica Balaban Branka, dr. med. [2204] · Uzelac Matija [3292]		
13.10.2025		

L5. General syndesmology.:
• [P08] (12:15 - 14:00) [1197]
  ○ A_341
 	
L6: General syndesmology.:
• [P08] (12:15 - 14:00) [1197]
  ○ A_341
		S2: Types of joints according to the shape and type of movements in the joint. Shoulder joint. (pg. 11, 13-15, 25-26, 150-152):
		• [P08] (14:15 - 16:00) [1600]
		  ○ Sem1
		• [P07] (14:15 - 16:00) [1197]
		  ○ Sem2

izv. prof. dr. sc. Arbanas Juraj, dr. med. [1197] · prof. dr. sc. Zoričić Cvek Sanja, dr. med. [1600]		
14.10.2025		

	P3: Joints and ligament connections of the shoulder girdle. Shoulder girdle mechanics. Shoulder joint. Shoulder joint mechanics. (pg. 146-148, 150-152):
	• [Zavod za anatomiju - Sala 1] (08:15 - 10:30) [2204] [3273]
	  ○ V1
	• [Zavod za anatomiju - Sala 2] (08:15 - 10:30) [1197]
	  ○ V2
	• [Zavod za anatomiju - Sala 1] (10:45 - 13:00) [2204]
	  ○ V3
	• [Zavod za anatomiju - Sala 2] (10:45 - 13:00) [1197]
	  ○ V4

01.06.2026		

L55: Visceral Innervation of Abdomen – Sympathetic and Parasympathetic Parts of the Autonomic Division of the Peripheral Nervous System.:
• [P01] (10:15 - 12:00) [1197]
  ◦ A_341
 	
L56: Visceral Innervation of Abdomen – Sympathetic and Parasympathetic Parts of the Autonomic Division of the Peripheral Nervous System.:
• [P01] (10:15 - 12:00) [1197]
  ◦ A_341		

izv. prof. dr. sc. Arbanas Juraj, dr. med. [1197]		

List of lectures, seminars and practicals:

LECTURES (TOPIC)	Number of hours	Location
L1. Overview of the executive curriculum, and student obligations.	1	[P08]
L2: Introduction to anatomy. Architecture of the human body.	1	[P08]
L3: Anatomical axes and planes.	1	[P08]
L4: Bones of the shoulder girdle.	1	[P08]
L5. General syndesmology.	1	[P08]
L6: General syndesmology.	1	[P08]
L7. General myology.	1	[P08]
L8. General myology.	1	[P08]
L9. General neurology.	1	[P08]
L10. General neurology.	1	[P08]
L11. General angiology.	1	[P08]
L12. Topographically important aspects of the arm.	1	[P08]
L13. Art. genus.	1	[P08]
L14. Hip joint mechanics. Muscles of the hip joint.	1	[P08]
L15. Innervation of the lower extremity.	1	[P08]
L16. Overview of the topography of the lower extremity.	1	[P08]
L17. Overview of the axial skeleton.	1	[P08]
L18. Overview of the bones of the skull.	1	[P08]
L19. Bones of the viscerocranium.	1	[P08]
L20. Cavities of the viscerocranium.	1	[P08]
L21. The spine. Joints between vertebrae. Joints between the head and the spine. Curves and movements of the spine.	1	[P08]
L22. General organization of the nervous system.	1	[P08]
L23. Spinal cord, brainstem and cranial nerves.	1	[P08]
L24. Cerebellum, hypothalamus and hypophysis.	1	[P08]

L25. Telencephalon.	1	[P08]
L26. Ventricular system of the brain.	1	[P08]
L27. Meninges, dural sinuses and intracranial compartements.	1	[P08]
L28. Arteries of the brain and spinal cord.	1	[P08]
L29. Head and neck regions. Neck fascia.	1	[P01]
L30. Trigonum caroticum. N.IX. Art. carotis communis.	1	[P01]
L31. Overview of the innervation of the head and neck.	1	[P01]
L32. N.V.-2, N.V.-3.	1	[P01]
L33. Examination of blood vessels of the head and neck. A. maxillaris. A. subclavia.	1	[P01]
L34. V. jugularis interna. V. subclavia.	1	[P01]
L35. The principle of structure of a hollow and parenchymatous organ. Examination of head and neck organs.	1	[P01]
L36. Head and neck lymph. Waldeyer's lymphatic ring.	1	[P01]
L37. Larynx. Phonation.	1	[P01]
L38. Nervus vagus.	1	[P01]
L41: Internal ear.	1	[P01]
L42. N. statoacousticus.	1	[P01]
L39. Eyeball - outer and middle eye leyer	1	[P01]
L40. Eyeball - the inner membrane of the eye. Internal muscles of the eye. Humor aqeuosus.	1	[P01]
L43: General Description of the Thorax. Lungs. Pleural Cavities. Pleura.	1	[P08]
L44: General Description of the Thorax. Lungs. Pleural Cavities. Pleura.	1	[P08]
L45: Heart.	1	[P01]
L46: Heart.	1	[P01]
L47: Abdomen: General Description, Surface Topography – Nine-region Pattern,Walls, Abdominal and Peritoneal Cavity, Relation to Other Regions.	1	[P08]
L48: Abdomen: General Description, Surface Topography – Nine-region Pattern,Walls, Abdominal and Peritoneal Cavity, Relation to Other Regions.	1	[P08]
L49: Retroperitoneal Region: Posterior Abdominal Wall and Organs, Abdominal Aorta, Inferior Vena Cava, Lymphatic System.	1	[P01]
L50: Retroperitoneal Region: Posterior Abdominal Wall and Organs, Abdominal Aorta, Inferior Vena Cava, Lymphatic System.	1	[P01]
L51: Pelvis: General Description, Pelvic Walls and Floor, Pelvic Cavity	1	[P01]
L52: Pelvis: General Description, Pelvic Walls and Floor, Pelvic Cavity	1	[P01]
L53: External Genital Organs – In Men and in Women. Perineal region.	1	[P01]
L54: External Genital Organs – In Men and in Women. Perineal region.	1	[P01]
L55: Visceral Innervation of Abdomen – Sympathetic and Parasympathetic Parts of the Autonomic Division of the Peripheral Nervous System.	1	[P01]
L56: Visceral Innervation of Abdomen – Sympathetic and Parasympathetic Parts of the Autonomic Division of the Peripheral Nervous System.	1	[P01]

EXERCISES (TOPIC)	Number of hours	Location
P1: Bones of the shoulder girdle. Humerus. (pg. 145-146, 150)	3	[Zavod za anatomiju - Sala 1] [Zavod za anatomiju - Sala 2]
P2: Bones of the forearm. Structure and bones of the hand. (pg. 156, 159-160)	3	[Zavod za anatomiju - Sala 1] [Zavod za anatomiju - Sala 2]
P3: Joints and ligament connections of the shoulder girdle. Shoulder girdle mechanics. Shoulder joint. Shoulder joint mechanics. (pg. 146-148, 150-152)	3	[Zavod za anatomiju - Sala 1] [Zavod za anatomiju - Sala 2]
P4: Elbow joint. Joint connections between the forearm bones. Elbow joint and distal radioulnar joint mechanics. Joints of the hand. Hand-joint mechanics. (pg. 156-157, 160-164)	3	[Zavod za anatomiju - Sala 1] [Zavod za anatomiju - Sala 2]
P5: Shoulder girdle muscles. Shoulder muscles. Upper arm muscles. (pg. 148-150, 152-155, 157-159)	3	[Zavod za anatomiju - Sala 1] [Zavod za anatomiju - Sala 4]
P6: Muscles of the forearm and hand. Auxiliary structures of the musculature in the area of the hand. (pg. 164-173)	3	[Zavod za anatomiju - Sala 1] [Zavod za anatomiju - Sala 4]
P7: Nerves of the upper extremity. (pg. 174-184)	3	[Zavod za anatomiju - Sala 1] [Zavod za anatomiju - Sala 2]
P8: Arteries of the upper extremity. Veins of the upper extremity. Lymphatic vessels of the upper extremity. Topographically important aspects of the arm. (pg: 184, 186-194) Review of upper extremity.	3	[Zavod za anatomiju - Sala 1] [Zavod za anatomiju - Sala 2]
P9: Bones of the pelvis. Thigh bone. Bones of the leg. Bones of the foot. (pg. 199-201, 202-203, 209-210, 219-220)	3	[Zavod za anatomiju - Sala 1] [Zavod za anatomiju - Sala 2]
P10: Pelvic joints and ligament attachments. Mechanics of the pelvic joints. Hip joint. Mechanics of the hip joint. Attachments between the tibia and fibula. Knee joint. Mechanics of the knee joint. Joints of the foot. Mechanics of the ankle joints. The arch of the foot. (pg. 201-202, 203-205, 211- 215, 220-224)	3	[Zavod za anatomiju - Sala 1] [Zavod za anatomiju - Sala 2]
P11: Muscles of the hip joint. Fascia lata and tractus iliotibialis. Muscles of the knee joint. Review of pelvic joints, hip joint and knee joint. (pg. 205-209, 216-218)	3	[Zavod za anatomiju - Sala 1] [Zavod za anatomiju - Sala 2]
P12: Muscles of the lower leg and foot. Support facilities of the musculature in the region of the lower leg and foot. Review of knee and ankle joints. (pg.225-231)	3	[Zavod za anatomiju - Sala 1] [Zavod za anatomiju - Sala 2]
P13: Nerves of the lower extremity. (pg. 231-238)	3	[Zavod za anatomiju - Sala 1] [Zavod za anatomiju - Sala 2]
P14: Arteries of lower extremity. Veins of the lower extremity. Lymph vessels of the lower extremity. Topographically important aspects of the leg. (pg. 238-249)	3	[Zavod za anatomiju - Sala 3] [Zavod za anatomiju - Sala 4]
P15: Inner surface of skull base (Basis crani interna): fossa crani anterior, media et inferior. Calvaria. (pg. 413-416)	3	[Zavod za anatomiju - Sala 1] [Zavod za anatomiju - Sala 2]
P16: External surface of the skull base (Basis cranii externa). (pg.416-418)	3	[Zavod za anatomiju - Sala 1] [Zavod za anatomiju - Sala 2]
P17: The cavities of the viscerocranium: orbita, cavitas nasi, cavitas oris. Mandibula. (pg.421 – 422, 495-498, 504)	3	[Zavod za anatomiju - Sala 1] [Zavod za anatomiju - Sala 2]
P18: Lateral regions of the skull: fossa temporalis, fossa infratemporalis, and fossa pterygopalatina. Typical and atypical vertebral bones, the shape of the vertebral collumn, the ribs, sternum.	3	[Zavod za anatomiju - Sala 1] [Zavod za anatomiju - Sala 2]
P19: The external shape and internal structure of the spinal cord. N. spinalis.	3	[Zavod za anatomiju - Sala 1] [Zavod za anatomiju - Sala 2]
P20: The external shape and internal structure of the brainstem.	3	[Zavod za anatomiju - Sala 1] [Zavod za anatomiju - Sala 2]

P21: Cerebellum. The fourth ventricle.	3	[Zavod za anatomiju - Sala 1] [Zavod za anatomiju - Sala 2]
P22: Diencephalon and the third ventricle. The hypophysis.	3	[Zavod za anatomiju - Sala 1] [Zavod za anatomiju - Sala 2]
P23: Telencephalon, pallium, rhinencephalon, basal ganglia.	3	[Zavod za anatomiju - Sala 1] [Zavod za anatomiju - Sala 2]
P24: The lateral ventricle. The meninges, blood vessels of the brain and spinal cord. Cerebrospinal fluid.	3	[Zavod za anatomiju - Sala 1] [Zavod za anatomiju - Sala 2]
P25: Surface anatomy of the neck (pg.533-534), Regions of the neck and neck triangles (pg.534) , Musculoskeletal system of the neck (pg.534-541).	3	[Zavod za anatomiju - Sala 1] [Zavod za anatomiju - Sala 2]
P26: Cervical fascia and connective tissues spaces (pg.541-545). Regions of the neck and neck triangles (pg.534) - trigonum caroticum, spatium parapharyngeum. Nerves of the neck (pg. 550-557).	3	[Zavod za anatomiju - Sala 1] [Zavod za anatomiju - Sala 2]
P27: Deep lateral facial region (pg.439-443)- Fossa infratemporalis. Fossa pterygopalatina. Masticatory muscles (pg.512-514).	3	[Zavod za anatomiju - Sala 1] [Zavod za anatomiju - Sala 2]
P28: Face and facial soft tissue (pg.428-436). Superficial lateral facial region (pg.436-439), Parotideomasseteric region. Retromandibular fossa.	3	[Zavod za anatomiju - Sala 1] [Zavod za anatomiju - Sala 2]
P29: Superficial neck layer. Lateral triangle of the neck. Arteries of the neck: A. carotis communis, A. sublavia (pg. 545-548). Veins of the neck (pg. 548-550). Lymph nodes of the neck (pg. 557-559).	3	[Zavod za anatomiju - Sala 1] [Zavod za anatomiju - Sala 4]
P30: Scalp (pg.425-428), superficial neck layer, Back musculature - deep back muscles (pg. 105-112)	3	[Zavod za anatomiju - Sala 1] [Zavod za anatomiju - Sala 2]
P31: Oral cavity (pg. 503-505), Tongue (pg. 516-520), Floor of the mouth (pg. 524-526), Lymphatics (pg. 526), Salivary glands (pg. 526-530), Palate (520-523)	3	[Zavod za anatomiju - Sala 1] [Zavod za anatomiju - Sala 2]
P32: Pharynx (pg. 575-579). Oesophagus.	3	[Zavod za anatomiju - Sala 1] [Zavod za anatomiju - Sala 2]
P33: Nose overview (pg. 492), External nose (pg. 493-494), Nasal cavities (pg. 495-499), Paranasal sinuses (pg. 499-500), Vascular, lymphatic and nervous system of nose (pg. 500-502), N. olfactorius (pg. 444)	3	[Zavod za anatomiju - Sala 1] [Zavod za anatomiju - Sala 2]
P34. Larynx, overview (pg. 563), Laryngeal skeleton (cartilages, ligaments, joints, muscles) (pg. 564-574), Thyreoid and parathyreoid glands (pg. 559-562)	3	[Zavod za anatomiju - Sala 1] [Zavod za anatomiju - Sala 2]
P35: Accessory apparatus of the eye.	3	[Zavod za anatomiju - Sala 1] [Zavod za anatomiju - Sala 2]
P36: Review and topography of head and neck. Anatomage.	3	[Zavod za anatomiju - Sala 2] [Zavod za anatomiju - Sala 3]
P37: Bony thorax and joints (pg.132-137). Muscles of the thorax. Innervation and irrigation of thoracic wall. Breast.	3	[Zavod za anatomiju - Sala 1] [Zavod za anatomiju - Sala 2]
P38. Trachea and lungs (pg.274-282), Pleura. Pleural cavities and breathing (pg. 289-290). Diaphragm (pg.87-90).	3	[Zavod za anatomiju - Sala 1] [Zavod za anatomiju - Sala 2]
P39: Heart (pg.255-268). Pericardium	3	[Zavod za anatomiju - Sala 1] [Zavod za anatomiju - Sala 2]
P40: Oesophagus and thymus (pg.282-288); Mediastinum (pg.288; 294-298). Content of the mediastinum	3	[Zavod za anatomiju - Sala 1] [Zavod za anatomiju - Sala 2]
P41: Abdominal wall muscles, function, irrigation, innervation. Inguinal canal.	3	[Zavod za anatomiju - Sala 1] [Zavod za anatomiju - Sala 2]
P42: Peritoneum. Abdominal organs: stomach, small and large intestine. (pg.340-343, 302-322)	3	[Zavod za anatomiju - Sala 1] [Zavod za anatomiju - Sala 2]

P43: Abdominal organs: liver, gallbladder, pancreas, spleen. (pg.322-340)	3	[Zavod za anatomiju - Sala 1] [Zavod za anatomiju - Sala 2]
P44: Vessels and nerves of the peritoneal cavity. (pg.343-348)	3	[Zavod za anatomiju - Sala 1] [Zavod za anatomiju - Sala 2]
P45: Posterior abdominal region: walls,kidney, ureter, suprarenal glands. (pg.93-98,352-361)	3	[Zavod za anatomiju - Sala 1] [Zavod za anatomiju - Sala 2]
P46: Content and relations of female pelvis. Female internal genital organs, blood vessels, lymphatic and nerves. (pg.371-383)	3	[Zavod za anatomiju - Sala 1] [Zavod za anatomiju - Sala 2]
P47: Content and relations of male pelvis. Male internal genital organs.	3	[Zavod za anatomiju - Sala 1] [Zavod za anatomiju - Sala 2]
P48: External genital organs, blood vessels, lymphatic and nerves (pg.383-392) Perineal region. Review thorax, abdomen, and pelvis. (pg.402-406)	3	[Zavod za anatomiju - Sala 1] [Zavod za anatomiju - Sala 2]

SEMINARS (TOPIC)	Number of hours	Location
S1: General osteology. (pg. 18-23).	2	[P08] [P09 - NASTAVA NA ENGLESKOM JEZIKU]
S2: Types of joints according to the shape and type of movements in the joint. Shoulder joint. (pg. 11, 13-15, 25-26, 150-152)	2	[P07] [P08]
S3. Function of a muscle in a joint movement. Agonist, antagonist, synergist. Auxiliary structures of muscle.	2	[P08] [Zavod za anatomiju - Seminarska]
S4. Plexus brachialis. (pg. 174-184)	2	[P08] [P09 - NASTAVA NA ENGLESKOM JEZIKU]
S5. Lymphatic vessels of the upper and lower extremity.	2	[ONLINE]
S6. Isolated bones of the cerebral part of the skull. Temporal bone – cavum tympani. Channels of the temporal bone.	2	[P04] [P08]
S.7. Mandibula. Articulatio temporomandibularis. Teeth. Masticatory muscles.	2	[P04] [P08]
S8. Classification of the CNS. General description of the brain and spinal cord.	2	[P04] [P08]
S9. Cranial nerves and nuclei of the brainstem.	2	[P07] [P08]
S10. Ventricles and cerebrospinal fluid. Circulation of cerebrospinal fluid.	2	[P03 - INFORMATIČKA UČIONICA] [P08]
S11. Cranial nerves: N. glossopharyngeus (pg.454-455), N. vagus (pg.455-457), N. hypoglossus (pg.457-458), N. accesorius (pg.457). Sympathicus of the head and neck.	2	[P01] [P08]
S12. Nerves of the head and neck - N.III,N.V-1, N.VII., Ganglion ciliare, oticum, pterygopalatinum and submandibular.	2	[P01] [P06]
S13. Parasympathetic innervation of head and neck. N. vagus. Parasymathetic ganglia.	2	[P01] [P05]
S15. Outer and middle ear.	2	[P04] [P05]
S14. Auxiliary organs of the eye. Blood vessels and nerves of the orbit.	2	[P06] [P07]

S16: Conduction system and innervation of the heart, coronary blood vessels, veins and lymphatic of the heart (pg.269-274). Pericardium (266-267)	2	[P06] [P08]
S17: Abdominal Walls, Peritoneal Cavity, Boundaries and Content. Development of abdominal viscera. Serous membranes. (pg.303, 304, 310).	2	[P06] [Zavod za anatomiju - Predavaonica]
S18: Vessels and nerves of the abdominal cavity.	2	[P01] [P05]
S19: Female internal genital organs.	2	[P01] [P05]
S20: Male internal genital organs.	2	[P05] [P06]

EXAM DATES (final exam):

1.	19.06.2026.
2.	03.07.2026.
3.	17.07.2026.
4.	04.09.2026.
5.	18.09.2026.
