

[Medicinski fakultet u Rijeci]

Curriculum 2025/2026

[Za kolegij]

Artificial Intelligence

Study programme: **Medical Studies in English (R)** (elective)
[Sveučilišni integrirani prijediplomski i diplomski studij]
Department: **[Centar za biomodeliranje i inovacije u medicini]**
Course coordinator: **izv. prof. dr. sc. Maričić Sven**

Year of study: **2**
ECTS: **1.5**
Incentive ECTS: **0 (0.00%)**
Foreign language: **Possibility of teaching in a foreign language**

Course information:

Overview of the field and development of artificial intelligence (AI). The Turing Test. Importance and perspectives of artificial intelligence in biomedicine. Topology of neural networks. Methods and techniques of artificial intelligence. Basic concept of machine learning. Application of neural networks, genetic algorithm. Robotics and artificial intelligence in the biomedical field. Working with data – assessment of basic parameters through image recording. The perspective of AI in biomedical systems. Application trends and direction of future development.

Curriculum:

Seminars list (with titles and explanation):

Introduction to the course, overview of the development of artificial intelligence. Basic concepts.

An overview of the field and the current development of artificial intelligence (AI). Overview of seminar topics.

Concept and structure of neural networks. Machine learning. The Turing test.

Basic settings, neural networks tasks. Their role and application in machine learning. The elements of the Turing test. Importance and significance in the biomedical field.

The concept of neural networks. The concept of genetic algorithm.

Application of neural networks in a laboratory environment. Presentation of the concept of the genetic algorithm. Defining important parameters.

Application in biomedical robotics.

Analysis of biomedical robotics examples. Advantages and disadvantages of using artificial intelligence in biomedical robotics.

Different uses of artificial intelligence: laboratory examples, clinical examples.

The utilization of artificial intelligence-based systems is analyzed, emphasizing laboratory and clinical case studies. The advantages and methodologies of usage are explored. Additionally, potential disadvantages and technological limitations are discussed, highlighting the critical assessment of AI's application in various fields.

Advanced technological solutions. Application in biomedical systems.

Advanced technological solutions based on artificial intelligence. Presentation of application in biomedical systems. Presentation of the technological solution.

Trends, the future of artificial intelligence development.

An overview of the development trends. Emphasis on the practical application of artificial intelligence.

Student obligations:

Regular attendance of classes, writing of a seminar paper.

Exam (exam taking, description of the written/oral/practical part of the exam, point distribution, grading criteria):**Other notes (related to the course) important for students:**
