

[Medicinski fakultet u Rijeci]

IZVEDBENI NASTAVNI PLAN 2023/2024

[Za kolegij]

Introduction to Scientific Research

Studij: Medical Studies in English (R)

[Sveučilišni integrirani prijediplomski i diplomski studij]

Katedra: [Katedra za društvene i humanističke znanosti u medicini]

Nositelj kolegija: izv. prof. dr. sc. Pupovac Vanja, prof.

Godina studija: **2** ECTS: **1**

Stimulativni ECTS: 0 (0.00%)

Strani jezik: Mogućnost izvođenja na stranom jeziku

Podaci o kolegiju:

The course "Introduction to Scientific Research" is mandatory for the 2nd year of the Integrated Undergraduate and Graduate University Study of Medicine in English program, encompassing 6 hours of lectures and 14 hours of seminars and enabling the acquisition of one (1) ECTS credit.

After taking the course, students will be able to critically interpret medical research and independently assess the credibility of scientific information.

Popis obvezne ispitne literature:

- 1. Presentations (PPT);
- 2. Hulley SB Cummings SR, Browner W S Grady DG, Newman TB, ed., Designing Clinical Research. 4th ed., Philadelphia, USA: Lippincott Williams & Wilkins, A Wolters Kluwer Business; 2013.
- 3. Matko Marušić, ed., Principles of Research in Medicine, 2nd ed., Zagreb: Medicinska naklada, 2015.

Popis dopunske literature:

Evans I, Thornton H, Chalmers I and Glasziou P. Testing Treatments, 2nd Edition; London: Pinter and Martin. 2011. Available from: http://www.testingtreatments.org/

Nastavni plan:

Predavanja popis (s naslovima i pojašnjenjem):

1. Science in medicine and clinical research

to understand the basic science settings of medicine and to define possible sources of imperfection and biases in research.

2. Anatomy and physiology of clinical research

understand basic terminology of clinical research

3. Population and sample (definition, basic characteristics)

to understand basic characteristics of the sample, to understand importance of representativeness of a sample and random sampling method

4. Population and sample (probabilistic and non-probabilistic sampling method; bias and random error)

to describe and understand different sampling methods, to recognise the most common biases in sampling method

5. Planning research (problem, aim, hypothesis)

to describe and understand differences between problem, aim and hypothesis in scientific research

6. Planning research (variables)

to describe and understand different types of variables

7. Types of study design (observational, interventional)

to describe and understand aims of research and appropriate types of study design.

8. Types of study design (primary and secondary, hierarchy of evidence)

to recognise aims and study design in an example of a research, to understand hierarchy of evidence

9. Scientific medical publications: types, basic characteristics, structure of scientific paper

to differentiate medical information (primary, secondary, and tertiary publications

10. Scientific medical publications: bibliographic and citation databases; assessment of scientific paper/journal

to search bibliographic and citation databases

11. Definitions (Schopenhauer, Shaw, Eccles, Marušić), the importance and the laws of the historical development of science (developmental phases, "migrating" of the scientific avantguard, specificities of medicine)

to understand the importance and laws of the historical development of science, to describe and interpret the phases of scientific development and the specificities of medicine. to explain the most important stands in science philosophy and to illustrate them by examples from science history

12. Bases of science philosophy (the structure of scientific revolutions according Kuhn; Wittgenstein, Popper, Feyerabend)

to name and explain basic notions of science philosophy, to analyse the historical development of empirical-inductive and deductive traits of science philosophy.

13. The social structure of science

to name and describe basic organisations in science

14. Scientific thinking, differences between medicine and alternative medicine

to explain basics of scientific thinking

15. Research ethics (research misconduct; frauds in science)

to understand the concept of research ethics and the importance of ethical principles in science. To recognize the forms of plagiarism and to discuss the ways of its prevention.

Seminari popis (s naslovima i pojašnjenjem):

Seminar

Seminars (1-5) imply designing a research plan according to a predetermined topic. The plan is made in groups of 3-5 students according to detailed instructions and it is additionally coordinated by the seminar leader.

Obveze studenata:

Regular class attendance (excused absence of 30% from each form of class is allowed (1 out of 6 lectures; 4 out of 14 seminars).

The student will complete the course if he collects 50% of the points that he can collect in the following way:

Four online quizzes (4x7% = 28%),

Critical analysis of scientific paper 1 (max 28%),

Critical analysis of scientific paper 2 (max 22%),

Design of a research plan (max 20%).

Ispit (način polaganja ispita, opis pisanog/usmenog/praktičnog dijela ispita, način bodovanja, kriterij ocjenjivanja):

Ostale napomene (vezane uz kolegij) važne za studente:

Absence from classes up to 30% (1 lecture and 4 seminars) assumes a justified reason and cannot be compensated (the exception is a discharge letter from hospital treatment). An absence of more than 30%, regardless of the reasons, entails reenrollment during the following academic year.

It is impossible to "reject" a positive grade obtained on the final exam, but only act per Article 46 of the Regulations on Studies of the University of Rijeka (a student dissatisfied with the grade submits a written appeal to the dean within 24 hours).

SATNICA IZVOĐENJA NASTAVE 2023/2024

Introduction to Scientific Research

Predavanja (mjesto i vrijeme / grupa)	Seminari (mjesto i vrijeme / grupa)
22.04.2024	
1. Science in medicine and clinical research: • Z6 (12:00 - 14:00) [420] • ITSR
