**IZVEDBENI NASTAVNI PLAN
2023/2024**

Za kolegij

Gynecology and Obstetrics

Studij:	Medical Studies in English (R) Sveučilišni integrirani prijediplomski i diplomski studij
Katedra:	Katedra za ginekologiju i opstetriciju
Nositelj kolegija:	izv. prof. dr. sc. Brnčić-Fischer Alemka, dr. med.
Godina studija:	6
ECTS:	12
Stimulativni ECTS:	0 (0.00%)
Strani jezik:	Mogućnost izvođenja na stranom jeziku

Podaci o kolegiju:

Gynecology and Obstetrics is a compulsory course in the sixth year of the Integrated undergraduate and graduate university study of Medicine in English and consists of 90 hours of lectures, 30 hours of seminars and 80 hours of practicals, which totals 200 hours (12 ECTS). Lectures are held for the entire generation of students in a lecture room (online if necessary), seminars are held also for entire generation of students, and practicals are held at different locations of the Clinic (11 sites) with four to five students per one group. During the first week of exercises in the morning shift, according to the schedule, students will do exercises at 11 workplaces. After the first week of exercises, each student will do two (2) 24-hour shifts at the Clinic for Gynecology and Obstetrics, new hospital on Sušak. These forms of teaching are mandatory. Classes are held entirely at the Department of Gynecology and Obstetrics and the Clinic for Gynecology and Obstetrics of the Clinical Hospital Center Rijeka, address is Vjekoslava Dukića 7 on Sušak.

Course aim: Acquisition of basic knowledge and skills in the fields of gynecology, obstetrics, fetal medicine, neonatology, gynecologic cytology, and human reproduction. Special emphasis is placed on the diagnosis of a normal pregnancy and management of normal labor, participation in antenatal and postpartum care within primary health care. Identification of pathologic conditions during pregnancy and puerperium and timely referral of pregnant women to institutions of higher healthcare levels. Counseling and preventive measures aimed at the protection of women's general and reproductive health. Identification of basic gynecologic disorders and raising awareness of the importance of early diagnosis and early initiation of appropriate treatment. Organization and expediency of screening for cervical cancer and knowledge of basic principles and methods in gynecologic cytology. Knowledge of basic family planning methods such as the prevention of unwanted pregnancies. In the field of human reproduction, timely consideration of the problem in couples with reduced fertility is determined so that appropriate treatment can be started immediately. Acquisition of the basics for postgraduate training through study, specialization, continuing medical education and lifelong learning. Acquisition of the basics for conducting scientific and research work.

Course content:

Obstetrics: Fertilization, implantation, and early pregnancy diagnosis. Development and functions of the placenta. Antenatal care and supervision of normal pregnancy. Prenatal diagnostics and fetal therapy. Normal labor and mechanisms of labor. Pathology of labor and obstetric surgery. Fetal surveillance in pregnancy and labor. Physiology and pathology of puerperium. Spontaneous abortions and gestational trophoblastic disease. Pregnancy infections and intraamniotic infection (IAI). Hematological, vascular, and surgical disorders in pregnancy. Postpartum hemorrhage – causes, diagnostics, and treatment. Gestational diabetes. Placental insufficiency and fetal growth restriction. Hypertensive disorders in pregnancy. Rh isoimmunization.

Neonatology: Newborn medical care.

Gynecology: Periods in a woman's life. Anatomy of the pelvis and perineum. Menstruation and menstrual disorders. Disorders of the vulva, vagina, cervix and body of the uterus, fallopian tubes and ovaries. Gynecologic surgeries. Gynecologic oncology. Gynecologic urology. Pelvic inflammatory disease and endometriosis. Sexually transmitted infections in gynecology.

Human reproduction: Features of human reproduction. Family planning and fertility regulation. Diagnosis and treatment of infertility. Medically assisted reproduction. Endocrine disorders in reproductive age. Perimenopause and menopause.

Gynecologic cytology: cytology in gynecology and obstetrics.

Course teaching: Classes are held in the form of lectures, seminars and practicals. Lectures are the first teaching activity held throughout 15 days. Lectures are held in the lecture room of the Clinic for Gynecology and Obstetrics, Clinical Hospital Center Rijeka (fifth floor). This is followed by the first test in the form of a written midterm exam (theoretical knowledge) (November 2024). Practical and seminars are held at 11 sites according to the teaching plan. Students are required to wear a white coat and a skirt/trousers when entering operating rooms at the Clinic and the delivery room. During teaching, the teacher demonstrates and briefly explains the skills planned for each practical related to the preparation unit. In the Skills Lab, supervised students practice the skills according to the teaching plan. During the practicals is scheduled oral midterm exam (practical knowledge). Seminars are held in the lecture room of the Clinic (online if necessary). For seminars, students need to prepare topics published in the course schedule and are expected to actively participate. Assessment during classes consists of a written midterm exam (theoretical knowledge) and an oral midterm exam (practical knowledge). At the end of the course, the student takes an oral final exam. The first date for the oral final exam is December and the second date is in February. By completing all course activities and passing the mandatory midterm exams and the oral final exam, the student acquires 12 ECTS credits.

Popis obvezne ispitne literature:

1. Charles RB Beckmann et. al. *Obstetrics and Gynecology*, Seventh edition. Lippincott Williams & Wilkins, 2013.
2. *Obstetrics by Ten Teachers*, 20th Edition, LCKenny, JEMyers. CRC Press 2017.

Popis dopunske literature:

1. F. Gary Cunningham et al. *Williams Obstetrics*. Twenty-third edition. McGraw-Hill Companies, 2010.
2. Jonathan S. Berek. *Gynecology*. Fourteenth edition. Lippincott Williams & Wilkins, 2007.
3. Jonathan S. Berek & Neville F. Hacker. *Practical Gynecology Oncology*. Fifth edition. Lippincott Williams & Wilkins, 2010.
4. Hugh S Taylor, Lubna Pall, Emre Seli. *Speroff's Clinical Gynecologic Endocrinology and Infertility*, Ninth edition. Lippincott Williams & Wilkins, 2020.

Nastavni plan:

Seminari popis (s naslovima i pojašnjenjem):

S1. Approach to the obstetric patient - history-taking, physical examination - obstetric examination, communication, informed consent

Learning outcomes: Complexity and sensibility of the approach to a pregnant woman. Identification of difficulties and obstacles in communicating with the patient and her family members. Specificities of obstetric history-taking. Components of the physical examination and detailed description of the examination of a pregnant woman. The significance of informed consent in the perinatologist's and obstetrician's daily work.

S2. Approach to the gynecology patient - history-taking, physical examination - gynecologic examination, communication, informed consent

Learning outcomes: The technique of gynecologic history-taking and its important details and specificities. Types of gynecologic physical examination. The significance of informed consent in gynecology, especially for surgical treatment.

S3. Expert recommendations for management of low-risk pregnancy

Learning outcomes: Definition of low-risk pregnancy and the concept of screening tests. Professional recommendations for preconception care, performing crucial diagnostic tests, and analyzing results during pregnancy until (term) childbirth.

S4. Psychologic aspects of labor pain.

Learning outcomes: Interpretation and analysis of the most common symptoms and signs present during childbirth. Planning and applying methods to relieve pain during childbirth, including standard pharmacological and nonpharmacological methods and other alternative methods.

S5. Obesity and pregnancy

Learning outcomes: Identification of obesity as a global, epidemiological problem. Categories of nutrition and recommended weight gain during pregnancy. The impact of obesity on the menstrual cycle, reduced fertility, frequency of miscarriages, macrosomia, prematurity, and congenital anomalies in pregnancy. Connection between obesity, preeclampsia, and gestational diabetes during pregnancy and prediction of pregnancy outcomes.

S6. Breech delivery - professional, ethical and forensic aspects

Learning outcomes: Historical development of the approach to breech delivery. Results of the perinatal outcome of breech delivery compared with the head-down delivery in our Clinic. Informed consent for a trial vaginal delivery and the right to a second opinion in accordance with the Act on Protection of Patients' Rights, as well as the patient's right to choose the method of completing delivery from the professional, ethical and forensic aspects.

S7. Pregnancy, labor and COVID-19

Learning outcomes: Facts about COVID-19 as new disease. Outcome of pregnancy, labor and puerperium. Complication related with infection in healthy pregnant women or in woman with risk.

S8. Obstetric surgery

Learning outcomes: The most important and commonly used operative methods for completing delivery. Advantages and disadvantages and the possible complications of certain obstetric operations. Application of certain operative methods depending on the indication and the specific clinical situation.

S9. Newborns

Learning outcomes: Term newborn: initial care, asphyxia, lung diseases (transient tachypnea, meconium aspiration, hyaline membrane disease, bronchopulmonary dysplasia, pneumonia), apnea, hypoglycemia, newborn of a diabetic mother, neonatal jaundice, congenital bacterial infections. Premature newborn (lung pathology, central nervous system pathology, diet, fluid and electrolyte balance, hematologic disorders, infections). Organization of neonatal care and treatment. Breast milk, breastfeeding.

S10. Diagnosis and treatment of premalignant cervical, vaginal and vulvar lesions

Learning outcomes: Classification of premalignant cervical lesions. Importance of regular gynecologic examinations

and detection of premalignant lesions. The role of colposcopy and the method of performing it. Destructive and excision methods of treating premalignant lesions as well as indications for the use of each method. Importance of regular check-ups in patients with previous premalignant lesions. Methods of prevention of premalignant lesions. The role of the media in the prevention of premalignant cervical disorders.

S11. Case reports. Differential diagnosis. Vaginal and uterine bleeding:

1. spontaneous abortion, 2. ectopic pregnancy, perimenopausal bleeding, postmenopausal bleeding. Learning outcomes: Basic elements of the differential diagnosis of gynecologic bleeding that have the same/similar clinical presentation.

S12. Contraception

Learning outcomes: The principles of choosing contraceptive methods depending on the patient's age and needs, and the main limitations of certain contraceptive methods. Counseling and behavioral methods that help the couple to accept and successfully continue using the chosen contraception method. Symptoms and signs associated List of practicals (with titles and learning outcomes): with contraception, with special emphasis on patients who require the assessment of a gynecology specialist or subspecialist for the safety of contraceptive use and the patients' future health.

S13. Pelvic floor weakness and pelvic floor defects. Urogynecology

Learning outcomes: Appearance, definition, clinical presentation, and therapeutic options for pelvic floor muscle disorders, descended and prolapsed uterus. The basics of micturition function. The mechanism of maintaining urinary continence. Incontinence – types, diagnosis, treatment. Urinary fistulas

S14. Surgical procedures in gynecology and reproductive medicine

The classic approach – abdominal surgical procedures, vaginal surgical procedures, laparoscopy and hysteroscopy, minor surgical diagnostic and therapeutic procedures. Learning outcomes: Basic approaches to the operating field and its preparation, as well as the basic instruments necessary to perform surgical procedures. Method and selection of surgical procedure in case of gynecologic surgical emergencies. Overview of available minimally invasive surgical techniques in gynecology. Indication area, equipment and specifics of work. Benefits, limitations, and complications of applying these techniques.

S15. Aging and hormone replacement therapy

Learning outcomes: Health problems of the postmenopausal female population and the achievements of preventive medicine. The role of hormone replacement therapy (HRT) in raising the quality of life of the elderly female population. Diseases and disorders of the body systems that can be alleviated or prevented by HRT, i.e. the indications for the introduction of HRT in postmenopausal women. Timing related to the indications for HRT, and contraindications for the therapy. Preparation of patients for HRT use and monitoring of such patients. Positive effects of HRT on target body systems (cardiovascular, skeletal, urogenital, skin, metabolism). Cessation of HRT use.

Vježbe popis (s naslovima i pojašnjenjem):

P1. Gynecologic examination (outpatient clinic)

1. Gynecologic examination. Gynecologic examination table, gloves, speculum, lighting.
2. Position of the patient for gynecologic examination – gynecologic positioning.
3. Examination with a speculum. Insertion of the speculum into the vagina. Inspection of the vagina and cervix. Description of a normal finding.
4. Taking a smear for cytologic analysis (cervicovaginal cytology – Pap test).
5. Taking a cervical smear for bacteriologic analysis.
6. Bimanual examination (palpation of internal genital organs). Description of a normal finding.
7. Gynecologic ultrasound diagnostics. Typical scanning planes. Examination of the uterus. Examination of ovaries. Echogenicity, differences in echogenicity of gynecological organs. .

P2. Preparation of a pregnant woman for examination, obstetric examination. (outpatient clinic).

1. Preparation of a pregnant woman for examination. Blood pressure measurement. Detection of albumin in urine. Weighing. Weight gain.
2. Appearance/Shape of the abdomen (size, shape). Measurement of abdominal circumference. Symphysisfundus height measurement.
3. Fetal assessment. Auscultation of the fetal heartbeats. Pinard's aural fetoscope.

4. Cardiotocography. Imaging technique and equipment. Normal cardiotocogram – description of a finding.
5. Internal (bimanual) examination of a pregnant woman
6. Clinical assessment of labor. Cardiotocographic assessment of labor.
7. Diagnosis of emergencies (optional, depending on daily cases). Latent phase of labor. Bleeding in the early stages of pregnancy. Bleeding in late pregnancy.
8. Ultrasound examination in the first trimester of pregnancy.
9. Ultrasound examination in the third trimester of pregnancy. Fetal biometry (BPD, AC, FL).
10. Physical basics of Doppler ultrasound, application in perinatology. Description of a sonogram. Typical blood vessels for assessment of fetal circulation. Ultrasound indices.

P3. History-taking and diagnosis of infertility (outpatient clinic)

1. Infertility diagnostic algorithm. Criteria, basic tests. Specifics of history-taking in women and men.
2. Follicular monitoring (folliculometry). Documentation of ultrasound findings.
3. Hormonal assay tests in the assessment of ovarian function.
4. Preparation of the couple for the medically assisted reproduction (MAR) treatment.

P4. Gynecologic cytology (clinic - IV floor)

1. Material needed to take a cytologic smear, spatula, brush, microscopic slide, gloves, fixative vials. Cytologic finding form. Images with basic elements of cervicovaginal cytology.
2. Organization of gynecologic cytology laboratory.
3. Cytologic screening. Equipment, smear-taking method and handling of slides for Pap test. Pap test procedure.
4. Demonstration of normal and abnormal cells in cytologic cervical samples (Pap test). Pattern and cytologic classification for cervical cytology. Interpretation of basic categories of abnormal cytologic cervical findings.
5. HPV detection laboratory. Use and basic interpretation of HPV test results.
6. Sampling and use of direct endometrial cytology.
7. Processing and use of liquid cytologic samples in gynecology.

P5. Diagnosis of premalignant and malignant cervical and vaginal lesions. (outpatient clinic).

1. PAP test – elements of a cytologic finding.
2. Examination with a speculum. Inspection of the vagina and cervix – macroscopically visible changes (normal and pathologic, depending on the cause).
3. Colposcopy – goal, principle, preparation of the field, performance. Schiller test.
4. Cervical biopsy and endocervical excochleation.

P6. Diagnostic procedures in gynecology. Minor surgical procedures. Operating room for minor surgical procedures (clinic - III floor)

1. Patient admission for minor procedures, preparation of medical documentation (daily case reports).
2. Preparation of the staff for surgery. Surgical hand scrubbing. Sterile dressing and putting on gloves.
3. Preparation of the patient for surgery. Surgical positioning, vaginal approach. Preparation of the operating field (vagina and perineum).
4. Surgical instruments for minor procedures. Kit. Diathermy incision loop, electrocautery with a ball tip.
5. Hysteroscopy – diagnostics and treatment

P7. Surgical principles in gynecology. Operating room (clinic - III floor)

1. Preparation of the staff for surgery. Surgical hand scrubbing. Sterile dressing and putting on gloves.
2. Preparation of the patient for surgery. Preparation of the operating field (abdomen, vagina, and perineum).
3. Surgical instruments for abdominal, vaginal, and laparoscopic procedures.
4. Equipment for laparoscopic surgery.
5. Assistance in surgical procedures (optional)

P8. Gynecologic surgery, preparation and monitoring of patients. Department of Gynecology

1. Gynecologic history. Organization and constituents of the Department.
2. Morning rounds. Postoperative monitoring of gynecologic patients. Preoperative monitoring and preparation of patients for the operating room.
3. Patient admission to the Department. Preoperative findings and diagnostics. Screening and categorization of patients scheduled for surgery (general gynecology, gynecologic urology and gynecologic oncology).
4. Gynecologic ultrasound diagnostics. Typical scanning planes. Examination of the uterus. Examination of the ovaries. Echogenicity, differences in echogenicity of gynecologic organs. Pathologic pelvic formations (optional).

5. Termination of unwanted pregnancy (medical and surgical).

P9. Care of women with pregnancy complications. Department of Maternal-Fetal Medicine

1. Perinatologic history, specifics of history-taking. Daily case reports (optional).
2. General examination of a pregnant woman.
3. Fetal position in the uterus and clinical fetal assessment (growth, signs of life).
4. Examination of the pelvis. Assessment of pelvis by inspection, anatomical landmarks on the body surface, the rhombus of Michaelis.
5. Pelvimetry. Internal and external pelvic measurements. Pelvimeter.
6. Internal examination and assessment of the pelvis.
7. Internal (bimanual) examination of a pregnant woman.
8. Self-monitoring of fetal movements, documentation of findings.
9. Nonstress test (NST) and oxytocin challenge test (OCT), examples of normal results.
10. Early amniocentesis – theoretical framework, method of performing the procedure.

P10. Laboring woman, labor and stages of labor. Delivery room

1. Medical records. Pregnancy logbook. Partogram. Labor logbook. Birth certificate.
2. Admission and preparation of the woman in labor. Admission cardiotocography, cardiotocographic monitoring during labor. Typical sites for external transducers placement on the pregnant woman's abdomen.
3. Assessment of labor progress. Clinical assessment of labor. Labor documentation.
4. Vaginal examination of a woman in labor. Stages of cervical dilation. Description of a finding in active labor. The position of the woman in the first stage of labor. Alternative childbirth delivery methods.
5. Expulsion of the fetus (optional): head-down delivery, head movements in expulsion (breech, vacuum extraction, cesarean section).
6. Episiotomy. Method of performing the procedure. Surgical care of the perineal incision. Suturing kit. Postpartum perineal care.
7. Placental stage of labor. Spontaneous delivery of the placenta. Signs of placental abruption. Examination of the placenta.
8. pH-metry. Equipment for performing the procedure. Fetal scalp blood sampling technique.
9. Newborn. APGAR score. Clamping and ligation of the umbilical cord. Examination and primary care of the newborn.
10. Early puerperium. Monitoring of the mother in labor in the delivery room. Vital signs. Fundal height. Postpartum hemorrhage.
11. Puerperium. Medical documentation in the puerperium. General status of puerpera, monitoring of puerpera. Physiological functions. Breastfeeding. The most common breastfeeding problems.

P11. Diagnosis and treatment of infertility. Department of Human Reproduction

1. Reproductive history. Patient's statement on her health condition.
2. Semen analysis. Demonstration of several different categories of semen analysis.
3. Ovulation test. Demonstration of several hormonal assay tests for assessment of cycle quality (ovulatory/anovulatory). Ultrasound detection of ovulation. Demonstration of a basal body temperature chart. Demonstration of cervical mucus – fern phenomenon.
4. Hysterosonosalingography/Hysterosalpingography. Demonstration of the procedure, video. Instrument kit. X-ray images of a normal finding (uterine anomaly, fallopian tube disease).
5. Cycle monitoring – ultrasound, hormonal. Documentation of findings.
6. Ultrasound in reproductive medicine. Egg retrieval. Embryo transfer. Videos.
7. Conservative treatment of infertility. Ovulation induction. Timing of sexual intercourse. Stimulation of ovulation. Case reports.
8. Medically assisted reproduction procedures. Homologous intrauterine insemination – video. In vitro fertilization and embryo transfer – video. Controlled ovarian hyperstimulation – video. Optional: intrauterine insemination, egg retrieval, embryo transfer. Frozen embryo transfer.
9. Fertility conservation. Cryopreservation of gametes and embryos.
10. Surgical treatment of infertility. Microoperations. Diagnostic laparoscopy. Diagnostic hysteroscopy. Transvaginal hydrolaparoscopy. Videos.

P12. Procedures associated with collection and processing of gametes and embryos

1. Semen analysis. Semen collection, preparation of semen for analysis, slide preparation. CASA analysis. Sperm counting in a chamber under a microscope. Test results and their interpretation. WHO criteria.
2. Preparation of semen for MAR procedures. Special procedures in cases of severe male infertility.
3. Methods of egg fertilization. In vitro fertilization (IVF). Intracytoplasmic sperm injection (ICSI).
4. Cryopreservation of gametes and embryos. Storage conditions. Storage space. Demonstration of the procedure with eggs. Demonstration of the procedure with sperm.

5. Laboratory forms for monitoring embryo development. Photographs of embryos at different stages of development.
6. Standard surgical procedures, books, records, protocols.

P13. Practical clinical skills. Skills Lab

1st week – skills in obstetrics and perinatology

1. Demonstration and practice of performing a gynecologic examination on a model. Dressing gloves. Holding a speculum. Taking a cytological smear from three typical sites. Taking a microbiologic smear. Bimanual examination and palpation of internal organs.
2. Demonstration and practice of performing an external examination of a pregnant woman. Model of a pregnant woman. Dressing gloves. Fetal lie, position, presentation, and posture (habitus). Shape of the maternal abdomen. Leopold-Pavlik's (I-IV) and Zangemeister's maneuvers. Cephalic engagement. Cephalopelvic disproportion.
3. Demonstration and practice of performing pelvic examination. External examination of the pelvis. Pelvimeter. Female pelvis, pelvic bony ring, landmarks on skeleton and abdomen of a model. Measurements of the normal pelvis – diameters (DS, SC, DT, CE). Internal examination and estimation of the pelvis. Internal measurements of the pelvis (CD, CV). Planes of the pelvis – inlet, midpelvis, outlet.
4. Demonstration and practice of performing internal (bimanual) examination of a pregnant woman. Description of a normal finding through pregnancy trimesters. Cervix, cervical ostium, cervical canal, presenting fetal part / vertex presentation.
5. Demonstration and practice of performing internal (bimanual) examination of a woman in labor. Determining of the descent of the presenting part in the birth canal. Demonstration and practice of the mechanism of normal delivery with fetal movements. Demonstration of typical fetal head structures and practice of recognizing typical sites.
6. Demonstration of fetal position/presentation in the uterus. Position, place, pose, and posture

P 14. Practical clinical skills. Skills Lab

2nd week – skills in presentation of patient case, gynecologic case reports

1. Major surgical procedures (5 cases according to the planned operational program). Under the teaching assistant's supervision, students analyze the patient's gynecologic medical history and independently present one case.
2. Minor surgical procedures (5 cases according to the planned operational program). Under the teaching assistant's supervision, students analyze the patient's gynecologic record/documentation and independently present one case.
3. Surgical instruments for abdominal surgical procedures. Names of instruments. Correct handling of instruments. Purpose of instruments.
4. Surgical instruments for minor procedures. Names of instruments. Correct handling of instruments. Purpose of instruments.

P15. Practical clinical skills. Skills Lab

3rd week Surgical procedures in obstetrics, gynecology and reproductive medicine

1. Demonstration: Manual extraction of the placenta. Instrumental exploration of the uterus after delivery / instrumental evacuation of the placenta. Instrument kit.
2. Demonstration: Vacuum extraction of the fetus. Vacuum kit.
3. Demonstration of gynecologic surgical procedures. Curettage. Instrument kit.
4. Surgical procedures for completion/termination of pregnancy. Vacuum aspiration + curettage. Intentional termination of pregnancy. Surgical completion of delayed abortion. Medical abortion methods.
5. Surgical procedures in the diagnosis of infertility. Laparoscopy and chromopertubation. Hysteroscopy. Transvaginal hydrolaparoscopy. Videos. Hysteroscopy model.
6. Contraception. Demonstration: condom, diaphragm. Insertion of intrauterine contraception. Instrument kit. Types of intrauterine contraception. Demonstration of hormonal contraceptive blister pack (combined, regimens, mini-pill)

Predavanja popis (s naslovima i pojašnjenjem):

L1. Anatomy of the pelvis and perineum. Embryology

Learning outcomes: Overview and anatomy of the pelvis, pelvic bones, and peritoneum. Pelvic and urogenital diaphragm. Blood vessels, nerves and lymphatic vessels of the pelvis. Female reproductive organs. Planes and spaces of the pelvis. Developmental stages in embryology

L2. Reproductive physiology

Learning outcomes: Neuroendocrinology, hypothalamus, pituitary gland, reproductive hormones, physiology of the menstrual cycle, cyclic changes of the endometrium, and follicle development.

L3. Puberty and first menstrual period. Pediatric and adolescent gynecology

Learning outcomes: Mechanism of the menstrual cycle. Stages of normal puberty. The most common disorders and diseases in childhood and puberty. Symptoms, diagnostic methods and treatment in pediatric and adolescent gynecology

L4. Fertilization, implantation and diagnosis of early pregnancy. Development and functions of the placenta. Physiology and pathology of amniotic fluid

Learning outcomes: Basics of the menstrual cycle, physiology of fertilization and implantation of a fertilized egg. Early pregnancy diagnosis. Formation, development, and function of the placenta. Composition and changes of amniotic fluid, determination of fetal maturity and compromise, ultrasound evaluation of amniotic fluid.

L5. Physiologic changes during pregnancy

Learning outcomes: Physiological changes of genital and extragenital organs and organ systems during pregnancy, including changes in normal laboratory values in normal pregnancy. Physiology of pregnancy and nutrient metabolism, endocrinology of pregnancy.

L6. Antenatal care and supervision of normal pregnancy

Learning outcomes: Basic principles of antenatal care, examinations, and all diagnostic and other procedures used to supervise normal pregnancy. Standard laboratory tests run in normal pregnancy and how to interpret them. Basic organization of health care for women and pregnant women (laboring women and midwives) in the Republic of Croatia.

L7. Prenatal screening and diagnosis of chromosomopathies. Invasive prenatal diagnosis

Learning outcomes: Definition and diagnosis of disorders, specifics of prenatal screening and monitoring, clinical significance and prevention. Human karyotype, numerical chromosomal abnormalities, structural chromosomal abnormalities, monofactorial disorders according to Mendel's laws of inheritance, polygenic and multifactorial disorders. Definition, methods, and goals of prenatal diagnosis of fetal chromosomopathies and malformations. Biochemical screening of Down syndrome, biochemical screening of neural tube defects.

L8. Spontaneous and habitual abortions. Gestational trophoblastic disease. Ectopic pregnancy

Learning outcomes: Types of miscarriage, their causes, identification of risk factors, clinical presentation, diagnostic and therapeutic procedures, possible complications, and consequences. Classification and incidence of gestational trophoblastic disease. Mechanism of complete and partial molar pregnancy, diagnosis, treatment. Patient follow-up after molar pregnancy. Diagnosis, classification, and treatment of gestational trophoblastic neoplasia. Pregnancy after gestational trophoblastic disease. Clinical features of ectopic pregnancy, etiologic factors, symptoms, diagnosis, and treatment.

L9. Sexually transmitted diseases (STD)

Learning outcomes: Causes, symptomatology, treatment. Screening, public health significance of STD.

L10. Lower and upper genital tract inflammation in women

Learning outcomes: Clinical presentation of the lower and upper female reproductive system, routes of transmission, and symptoms of the diseases. Diagnostic modalities and options in the therapeutic approach. Chronic pelvic inflammatory disease.

L11. Gynecologic emergencies (symptoms, diagnosis and treatment)

Learning outcomes: Symptomatology of acute gynecologic conditions that require immediate intervention and surgical care. Emergency surgical procedures in gynecology.

L12. Gynecologic cytology

Learning outcomes: Cervical cancer screening – significance, organization, and implementation. Proper collection and handling of cytology specimens. Definition and classification of the Pap test. Application of Pap test in screening, diagnosis, and monitoring of cervical lesions. Cytology in the diagnosis of endometrial changes. Cytology in the diagnosis, staging, and monitoring of gynecologic malignancies.

L13. Fetal surveillance in pregnancy and labor. Cardiotocography. pH-metry

Learning outcomes: Methods for fetal assessment during pregnancy and labor.

L14. Labor onset. Normal labor and mechanisms of labor, physiology of the first and second labor stages

Learning outcomes: Principles of normal labor, factors affecting labor (birth canal, uterine contractions, and fetus), and the mechanism of physiologic labor. Different stages of labor. Interpretation of all fetal movements during physiologic labor in the cephalic presentation. Clinical assessment of labor, the effect of uterine contractions on the course of delivery.

L15. Physiology and pathology of the third and fourth labor stages

Learning outcomes: Third labor stage, signs of placental abruption, examination of the placenta, fourth labor stage, complications of the third and fourth labor stages – bleeding, uterine atony, uterine inversion, peripartum hysterectomy, maternal mortality.

L16. Physiology and pathology of the postpartum period

Learning outcomes: Physiologic processes in the postpartum period, midwife's postpartum monitoring, and the most significant complications and diseases in that period. Pathologic processes in the postpartum period. Postpartum hemorrhage, puerperal infections, mastitis, thrombosis and thromboembolism, urinary tract infections, postpartum psychiatric disorders – causes, diagnosis, and treatment.

L17. Endometriosis

Learning outcomes: Epidemiology and etiology of endometriosis, its pathogenesis, pathohistology, and symptoms. Critical approach to diagnosis and classification of the disease. The importance of endometriosis in human reproduction. Treatment options for endometriosis.

L18. Menstrual disorders and uterine bleeding

Learning outcomes: Normal menstruation, abnormal menstruation, dysfunctional uterine bleeding, and juvenile metrorrhagia. Pathophysiology of dysfunctional uterine bleeding. Diagnosis and treatment. Fractional curettage, endometrial ablation, IUS, and hysterectomy²

L19. Family planning and fertility regulation. Contraception

Learning outcomes: Definition, objectives and principles of family planning (FP). Individual FP counseling, group work. Benefits of FP for mother and child. Public health significance of FP. Family planning methods. Natural FP methods. Barrier methods. Chemical contraception. Intrauterine contraception. Hormonal contraception. Emergency contraception. Permanent contraception methods. Laws and policies.

L20. Perimenopause, premenopause and menopause

Learning outcomes: Definition, endocrinologic and clinical features of premenopause and postmenopause, effects of postmenopause on a woman's body, urogenital atrophy. The mechanism of menopausal hot flashes. Osteoporosis. Cardiovascular diseases. Hormone replacement therapy, indications and contraindications.

L21. Hypertensive disorders in pregnancy

Learning outcomes: Definition, classification, epidemiology, etiology, pathophysiology, clinical presentation, and treatment of hypertensive disorders in pregnancy

L22. Fetal growth restriction

Learning outcomes: Basic pathophysiology of fetal growth restriction. Distinguish between different types of fetal growth restrictions. Diagnostic procedures for detection of fetal growth restriction and procedures performed in pregnant women with detected fetal growth restriction.

L23. Premature labor. Postterm pregnancy

Learning outcomes: Definition, risk factors, treatment, and complications of premature labor. Definition, clinical significance, and procedures for post-term pregnancy.

L24. Bleeding during the second half of pregnancy and labor. Blood clotting disorders during pregnancy and labor

Learning outcomes: Causes and treatment of bleeding in late pregnancy (placenta previa, placental abruption, rupture of the marginal sinus) and labor (uterine rupture). Blood clotting disorders during pregnancy and puerperium, basic mechanisms and therapeutic guidelines.

L25. Induction and stimulation of labor

Learning outcomes: Definition, goals, methods, and risks of these obstetric procedures.

L26. Benign and premalignant cervical diseases. Malignant cervical diseases. Premalignant and malignant vaginal and vulvar diseases

Learning outcomes: Human papilloma virus. Classification of cervical intraepithelial neoplasia. Guidelines in the diagnosis and treatment of premalignant cervical lesions. Risk factors for malignancy. Etiopathogenesis and natural history of the disease, symptoms, diagnosis, treatment. Survival rate, prognosis and patient monitoring, quality of life. Treatment modalities, surgical treatment, radiotherapy, and chemoradiation. Survival rate, prognosis and patient monitoring, quality of life. Cervical cancer in pregnancy.

L27. Benign and malignant diseases of the ovaries, fallopian tubes and peritoneum

Learning outcomes: Types, symptoms, diagnosis, and treatment of benign ovarian tumors. Epithelial benign ovarian tumors, functional ovarian cysts, follicular cysts, corpus luteum cysts. Risk factors for malignancies, etiopathogenesis and natural history of the disease, symptoms, diagnosis, and treatment. Survival rate, prognosis and patient monitoring, quality of life.

L28. Benign and malignant diseases of the endometrium and uterine corpus

Learning outcomes: Benign uterine tumors. Pathogenesis of fibroids, histologic structure, types of fibroids, diagnosis and treatment. Endometrial hyperplasia, disease mechanism, classification, clinical presentation, diagnosis. Endometrial polyps. Risk factors for malignancy, etiopathogenesis, and natural history of the disease, symptoms, diagnosis, treatment. Survival rate, prognosis and patient monitoring, quality of life.

L29. Rh-isoimmunization and hydrops fetalis

Learning outcomes: The concept of Rh-isoimmunization and the etiology and pathophysiology of hydrops fetalis. Monitoring of isoimmunized pregnant woman and fetus. Treatment.

L30. Gestational diabetes

Learning outcomes: Definition, screening, diagnostic criteria, complications, and treatment of this gestational diabetes

L31. Pathology of labor I (abnormal fetal position and presentation, rotation and flexion of the fetal head)

Learning outcomes: Abnormal labor due to abnormal fetal position and presentation, rotation and flexion of the fetal head.

L32. Pathology of labor II (labor and birth canal abnormalities, disproportion)

Learning outcomes: Causes of dystocia. Identification of irregular contractions, narrowed pelvis, cephalopelvic disproportion. Fetal shoulder dystocia.

L33. Multifetal pregnancy and labor. Intrahepatic cholestasis of pregnancy

Learning outcomes: Epidemiology, classification and specificities of multiple pregnancies and birth of twins. Basic concept and definition of intrahepatic cholestasis, etiology, differential diagnosis, treatment and prognosis

L34. Infections in pregnancy. TORCH. Intraamniotic infection (IAI)

Learning outcomes: The most common infections in pregnancy and their effect on the course and outcome of pregnancy. Definition, diagnosis, treatment, and prevention of TORCH and IAI.

L35. Endocrine disorders - PCOS

Learning outcomes: Hyperandrogenism, PCOS – theories on the causes of polycystic ovaries, genetic factors, fetal programming. Symptoms and signs of PCOS. Diagnostic criteria. Treatment of PCOS, treatment risks. Long-term health risks of PCOS.

L36. Endocrine disorders - ovarian insufficiency

Learning outcomes: Definition of ovarian reserve. Methods for ovarian reserve testing. Premature ovarian aging. Definition of reproductive aging. Disorders associated with reproductive aging. Cushing's syndrome, congenital adrenal hyperplasia, androgen-secreting ovarian and adrenal tumors. Stromal hyperplasia and stromal hyperthecosis. Virilization during pregnancy and virilizing adrenal tumors. Disorders of prolactin secretion.

L37. Gynecologic surgery, endoscopy, preoperative preparation and postoperative patient monitoring

Learning outcomes: Basic surgical principles and surgical procedures in gynecology. Basics of preoperative preparation

of patients for gynecologic surgical procedures and postoperative care. Hysterectomy indications and techniques and other surgical techniques in gynecology.

L38. Complications after surgery and care of gynecology patients

Learning outcomes: Symptoms, diagnosis, and treatment of the most common surgical complications. Uterine perforation. Abdominal organ injury. Abdominal bleeding. Wound infection. Sepsis.

L39. Amenorrhea

Learning outcomes: Definition and classification of amenorrhea. Four levels of disorders that cause amenorrhea. Diagnostic algorithms of individual levels: I – uterus and vagina, II – ovary, III – pituitary gland, IV – hypothalamus. Hormone tests for the diagnosis of certain disorders. Principles of treatment.

L40. Characteristics of human reproduction. Reproductive years

Learning outcomes: Definitions of reproductive period, monthly and annual fecundity. Stages and processes of human reproduction. Relationship between age and fertility. Factors affecting fertility. Decreased fertility in women and men.

L41. Infertility I (causes and diagnosis)

Learning outcomes: Definition of infertility. Diagnostic procedure and schedule of tests. Semen analysis. Detection of ovulation. Evaluation of fallopian tube function. Ovarian reserve testing. Procedures and methods for diagnosis of infertility. Other affected organs that cause infertility.

L42. Infertility II (treatment - ovulation induction, surgery, medical insemination)

Learning outcomes: List of seminars (with titles and learning outcomes): Principles of ovulation induction. Monofollicular growth and controlled ovarian hyperstimulation. Microsurgical principles of treatment of affected fallopian tubes. Corrective uterus surgery. Other surgical procedures affecting fertility. Medical insemination procedures. Freezing, storing and preserving biological samples. Gamete donation.

L43. Intentional termination of pregnancy. Medically indicated termination of pregnancy

Learning outcomes: Options for intentional termination of pregnancy. Advantages and disadvantages of certain methods of termination of pregnancy. Laws and policies.

L44. Medications in pregnancy, labor and puerperium. Medications in gynecology and reproductive medicine

Learning outcomes: The issue of taking medicines during pregnancy. The most commonly used medicines in pregnancy. Medications used in induction and stimulation of labor. Progesterone in pregnancy, gynecologic disorders and reproductive medicine. Induction and stimulation of ovulation.

L45. Patient's rights and appeal of conscience

Final meeting of the theoretical part of the course. Making arrangements for writing the midterm exam.

Obveze studenata:

Students are obligated to regularly attend and actively participate in all forms of classes. They must bring a clean ironed white coat to the practicals. For attending practicals in the operating rooms, students must change into official clean uniforms in the locker rooms of the operating room. Students must bring a white coat and skirt/trousers to attend practicals in the delivery room.

Ispit (način polaganja ispita, opis pisanog/usmenog/praktičnog dijela ispita, način bodovanja, kriterij ocjenjivanja):

Evaluation (ECTS credit system):

Student grading is conducted according to the current Ordinance on Studies of the University of Rijeka and the Ordinance on Student Assessment and Evaluation at the Faculty of Medicine in Rijeka (approved by the Faculty Council).

Student work is assessed and evaluated during classes and on the final exam. Students can obtain 50 grade points during classes and 50 grade points on the final exam, which totals 100 grade points. Students are graded according to the ECTS (A-E) and numerical system (1-5). Grading within the ECTS system is performed according to absolute distribution.

Out of a maximum of 50 grade points possible to obtain points during classes, the student must obtain a minimum of 25 grade points in order to take the final exam.

A student who doesn't obtain 25 grade points during classes cannot take the final exam and must retake the course.

Students who don't obtain 25 grade points during classes and students who aren't satisfied with the grade obtained on the written and oral midterm exam will have the opportunity to retake the midterm exam in the scheduled time before the third exam period in July 2025.

- a. Attendance at lectures, seminars and practicals is mandatory but not evaluated with grade points. The student obtains the grade points by taking two midterm exams.

I. A maximum of 50 grade points can be obtained during classes:

- a. Attendance at lectures, seminars and practicals – not evaluated by grade points.
- b. Compulsory written midterm exam (theoretical knowledge) – up to 25 points. The test is comprised of up to 100 questions.
- c. Compulsory oral midterm exam (practical knowledge) – up to 25 points. The student is evaluated with a grade 1-5.

a. Attendance at lectures, seminars and practicals

Attendance at lectures, seminars and practicals is compulsory, but it isn't evaluated with grade points. Attendance will be checked and recorded in specially prepared forms. A student can be absent from up to 30% of classes provided they have a justifiable cause, which is justified by a medical certificate or another document. If a student is justifiably or unjustifiably absent from more than 30% of theoretical classes – lectures, they cannot continue to attend the course and cannot take the final exam. In that case, the student obtains 0 ECTS credits and an F grade.

b. Compulsory written midterm exam (theoretical knowledge)

After attending lectures (48), the student is obligated to take a written midterm exam (theoretical knowledge), on which they can obtain up to 25 points. The midterm exam will be held on November 6th, 2024. in the premises of the Department of Gynecology and Obstetrics, that is, the Hospital for Women and Children, Vjekoslava Dukića 7 and ev. additional spaces considering the total number of students attending the course.

Based on the 60-question test, the distribution of points is the following:

- correct answers:

31-33	12.5 grade points
34-36	13 grade points
37-38	14 grade points
39-40	15 grade points
41-42	16 grade points
43-44	17 grade points
45-46	18 grade points
47-48	19 grade points
49-50	20 grade points
51-52	21 grade points

53-54 22 grade points

55-56 23 grade points

57-58 24 grade points

59-60 25 grade points

In case the student receives the grade *insufficient* or isn't satisfied with the grade obtained (which they must reject by signing a specially prepared form), they can retake the written midterm exam in December 2024 or January 2025, when the date will be agreed upon and announced (before taking the final oral exam).

c. Compulsory oral midterm exam (practical knowledge)

After attending practicals and seminars an oral midterm practical exam will be held on the November 19th and 20th 2024. at the Department of Gynecology and Obstetrics (Clinic for Gynecology and Obstetrics). The student will be evaluated with a grade 1-5 and grade points as follows:

sufficient (2) 12.5 grade points

good (3) 17 grade points

very good (4) 20 grade points

excellent (5) 25 grade points

In case the student receives the grade *insufficient* or isn't satisfied with the grade obtained on the oral midterm practical exam (which they must reject by signing a specially prepared form), they can retake the oral midterm exam in December 2024 or January 2025, when the date will be agreed and announced (before taking the final oral exam).

In case the student doesn't pass one of the two midterm exams in the second attempt or doesn't obtain at least 25 grade points in the second attempt, they cannot take the final exam. The student can retake the midterm exam(s) on one of the final exam terms (July and September 2024). In that case, the student cannot register for that final exam term but can register for the next exam term.

II. Final exam (a maximum of 50 grade points)

The final exam is oral. The student can obtain a maximum of 50 grade points on the final exam.

The final exam can be taken by:

- students who have obtained a minimum of 25 grade points or more during the course.

The following students cannot take the final exam:

- Students who didn't obtain a single grade point during classes don't have the right to take the final exam (they must re-enroll in the course in the next academic year).
- Students who obtained up to 24 grade points and failed to pass the retaken midterm exams during the academic year don't have the right to take the final exam (they must re-enroll in the course in the next academic year).
- Students who, according to the attendance record, missed more than 30% of classes don't have the right to take the final exam (they must re-enroll in the course in the next academic year).

Students who obtained at least 25 grade points during classes and didn't successfully pass the oral final exam have the right to reapply for the final exam in the next exam term.

Success in the oral final exam is converted into grade points as follows:

Insufficient (1) 0

Sufficient (2) 20

Good (3) 30

Very good (4) 40

Excellent (5) 50

To pass the oral final exam and acquire the right to final assessment (including the addition of previously obtained grade points during the course on midterm exams), the student must be positively assessed in the oral exam (at least 20 grade points) with a total score of 50%.

According to the recommendation of the University, the student can reject a positive grade in the oral final exam. In that case, the student signs a specially prepared form by which they accept the grade *insufficient* and commits to take the exam on one of the three possible exam terms.

Assessment in the ECTS system is performed by absolute distribution, i.e., based on the final result, and grade points and grades are transferred into numerical system in accordance with the Decision on Amendments to the Ordinance on Studies of the University of Rijeka (Article 29):

A 90.0–100.0% excellent (5)

B 75.0–89.9% very good (4)

C 60.0–74.9% good (3)

D 50.0–59.9% sufficient (2)

F 0–49.9% insufficient (1)

Ostale napomene (vezane uz kolegij) važne za studente:

Teaching content and all information regarding the course and exam terms can be found on the website of the Faculty of Medicine in Rijeka (<http://www.medri.uniri.hr/>).

Popis predavanja, seminara i vježbi:

PREDAVANJA (TEMA)	Broj sati	Mjesto održavanja
L1. Anatomy of the pelvis and perineum. Embryology	2	Katedra za ginekologiju i opstetriciju - predavaonica (V. kat)
L2. Reproductive physiology	2	Katedra za ginekologiju i opstetriciju - predavaonica (V. kat)
L3. Puberty and first menstrual period. Pediatric and adolescent gynecology	2	Katedra za ginekologiju i opstetriciju - predavaonica (V. kat)
L4. Fertilization, implantation and diagnosis of early pregnancy. Development and functions of the placenta. Physiology and pathology of amniotic fluid	2	Katedra za ginekologiju i opstetriciju - predavaonica (V. kat)
L5. Physiologic changes during pregnancy	2	Katedra za ginekologiju i opstetriciju - predavaonica (V. kat)
L6. Antenatal care and supervision of normal pregnancy	2	Katedra za ginekologiju i opstetriciju - predavaonica (V. kat)
L7. Prenatal screening and diagnosis of chromosomopathies. Invasive prenatal diagnosis	2	Katedra za ginekologiju i opstetriciju - predavaonica (V. kat)
L8. Spontaneous and habitual abortions. Gestational trophoblastic disease. Ectopic pregnancy	2	Katedra za ginekologiju i opstetriciju - predavaonica (V. kat)
L9. Sexually transmitted diseases (STD)	2	Katedra za ginekologiju i opstetriciju - predavaonica (V. kat)
L10. Lower and upper genital tract inflammation in women	2	Katedra za ginekologiju i opstetriciju - predavaonica (V. kat)
L11. Gynecologic emergencies (symptoms, diagnosis and treatment)	2	Katedra za ginekologiju i opstetriciju - predavaonica (V. kat)
L12. Gynecologic cytology	2	Katedra za ginekologiju i opstetriciju - predavaonica (V. kat)

L13. Fetal surveillance in pregnancy and labor. Cardiotocography. pH-metry	2	Katedra za ginekologiju i opstetriciju - predavaonica (V. kat)
L14. Labor onset. Normal labor and mechanisms of labor, physiology of the first and second labor stages	2	Katedra za ginekologiju i opstetriciju - predavaonica (V. kat)
L15. Physiology and pathology of the third and fourth labor stages	2	Katedra za ginekologiju i opstetriciju - predavaonica (V. kat)
L16. Physiology and pathology of the postpartum period	2	Katedra za ginekologiju i opstetriciju - predavaonica (V. kat)
L17. Endometriosis	2	Katedra za ginekologiju i opstetriciju - predavaonica (V. kat)
L18. Menstrual disorders and uterine bleeding	2	Katedra za ginekologiju i opstetriciju - predavaonica (V. kat)
L19. Family planning and fertility regulation. Contraception	2	Katedra za ginekologiju i opstetriciju - predavaonica (V. kat)
L20. Perimenopause, premenopause and menopause	2	Katedra za ginekologiju i opstetriciju - predavaonica (V. kat)
L21. Hypertensive disorders in pregnancy	2	Katedra za ginekologiju i opstetriciju - predavaonica (V. kat)
L22. Fetal growth restriction	2	Katedra za ginekologiju i opstetriciju - predavaonica (V. kat)
L23. Premature labor. Postterm pregnancy	2	Katedra za ginekologiju i opstetriciju - predavaonica (V. kat)
L24. Bleeding during the second half of pregnancy and labor. Blood clotting disorders during pregnancy and labor	2	Katedra za ginekologiju i opstetriciju - predavaonica (V. kat)
L25. Induction and stimulation of labor	2	Katedra za ginekologiju i opstetriciju - predavaonica (V. kat)
L26. Benign and premalignant cervical diseases. Malignant cervical diseases. Premalignant and malignant vaginal and vulvar diseases	2	Katedra za ginekologiju i opstetriciju - predavaonica (V. kat)
L27. Benign and malignant diseases of the ovaries, fallopian tubes and peritoneum	2	Katedra za ginekologiju i opstetriciju - predavaonica (V. kat)
L28. Benign and malignant diseases of the endometrium and uterine corpus	2	Katedra za ginekologiju i opstetriciju - predavaonica (V. kat)
L29. Rh-isoimmunization and hydrops fetalis	2	Katedra za ginekologiju i opstetriciju - predavaonica (V. kat)
L30. Gestational diabetes	2	Katedra za ginekologiju i opstetriciju - predavaonica (V. kat)
L31. Pathology of labor I (abnormal fetal position and presentation, rotation and flexion of the fetal head)	2	Katedra za ginekologiju i opstetriciju - predavaonica (V. kat)
L32. Pathology of labor II (labor and birth canal abnormalities, disproportion)	2	Katedra za ginekologiju i opstetriciju - predavaonica (V. kat)
L33. Multifetal pregnancy and labor. Intrahepatic cholestasis of pregnancy	2	Katedra za ginekologiju i opstetriciju - predavaonica (V. kat)
L34. Infections in pregnancy. TORCH. Intraamniotic infection (IAI)	2	Katedra za ginekologiju i opstetriciju - predavaonica (V. kat)
L35. Endocrine disorders - PCOS	2	Katedra za ginekologiju i opstetriciju - predavaonica (V. kat)
L36. Endocrine disorders - ovarian insufficiency	2	Katedra za ginekologiju i opstetriciju - predavaonica (V. kat)

L37. Gynecologic surgery, endoscopy, preoperative preparation and postoperative patient monitoring	2	Katedra za ginekologiju i opstetriciju - predavaonica (V. kat)
L38. Complications after surgery and care of gynecology patients	2	Katedra za ginekologiju i opstetriciju - predavaonica (V. kat)
L39. Amenorrhea	2	Katedra za ginekologiju i opstetriciju - predavaonica (V. kat)
L40. Characteristics of human reproduction. Reproductive years	2	Katedra za ginekologiju i opstetriciju - predavaonica (V. kat)
L41. Infertility I (causes and diagnosis	2	Katedra za ginekologiju i opstetriciju - predavaonica (V. kat)
L42. Infertility II (treatment – ovulation induction, surgery, medical insemination)	2	Katedra za ginekologiju i opstetriciju - predavaonica (V. kat)
L43. Intentional termination of pregnancy. Medically indicated termination of pregnancy	2	Katedra za ginekologiju i opstetriciju - predavaonica (V. kat)
L44. Medications in pregnancy, labor and puerperium. Medications in gynecology and reproductive medicine	2	Katedra za ginekologiju i opstetriciju - predavaonica (V. kat)
L45. Patient's rights and appeal of conscience	2	Katedra za ginekologiju i opstetriciju - predavaonica (V. kat)

VJEŽBE (TEMA)	Broj sati	Mjesto održavanja
P1. Gynecologic examination (outpatient clinic)	5	
P2. Preparation of a pregnant woman for examination, obstetric examination. (outpatient clinic).	5	
P3. History-taking and diagnosis of infertility (outpatient clinic)	5	
P4. Gynecologic cytology (clinic – IV floor)	5	
P5. Diagnosis of premalignant and malignant cervical and vaginal lesions. (outpatient clinic).	5	
P6. Diagnostic procedures in gynecology. Minor surgical procedures. Operating room for minor surgical procedures (clinic - III floor)	5	Katedra za ginekologiju i opstetriciju - Sala za male ginekološke zahvate (II. kat)
P7. Surgical principles in gynecology. Operating room (clinic – III floor)	5	Katedra za ginekologiju i opstetriciju - operacijska sala (III. kat)
P8. Gynecologic surgery, preparation and monitoring of patients. Department of Gynecology	5	Katedra za ginekologiju i opstetriciju
P9. Care of women with pregnancy complications. Department of Maternal-Fetal Medicine	5	Katedra za ginekologiju i opstetriciju - Odjel fetalne i maternalne medicine (III. kat)
P10. Laboring woman, labor and stages of labor. Delivery room	10	Katedra za ginekologiju i opstetriciju - Rađaonica (IV. kat)
P11. Diagnosis and treatment of infertility. Department of Human Reproduction	5	Katedra za ginekologiju i opstetriciju - Zavod za humanu reprodukciju (prizemlje)
P12. Procedures associated with collection and processing of gametes and embryos	5	Katedra za ginekologiju i opstetriciju - Zavod za humanu reprodukciju (prizemlje)
P13. Practical clinical skills. Skills Lab	5	Katedra za ginekologiju i opstetriciju - predavaonica (V. kat)
P 14. Practical clinical skills. Skills Lab	5	

P15. Practical clinical skills. Skills Lab	5

SEMINARI (TEMA)	Broj sati	Mjesto održavanja
S1. Approach to the obstetric patient – history-taking, physical examination – obstetric examination, communication, informed consent	2	Katedra za ginekologiju i opstetriciju - predavaonica (V. kat)
S2. Approach to the gynecology patient – history-taking, physical examination – gynecologic examination, communication, informed consent	2	Katedra za ginekologiju i opstetriciju - predavaonica (V. kat)
S3. Expert recommendations for management of low-risk pregnancy	2	Katedra za ginekologiju i opstetriciju - predavaonica (V. kat)
S4. Psychologic aspects of labor pain.	2	Katedra za ginekologiju i opstetriciju - predavaonica (V. kat)
S5. Obesity and pregnancy	2	Katedra za ginekologiju i opstetriciju - predavaonica (V. kat)
S6. Breech delivery – professional, ethical and forensic aspects	2	Katedra za ginekologiju i opstetriciju - predavaonica (V. kat)
S7. Pregnancy, labor and COVID-19	2	Katedra za ginekologiju i opstetriciju - predavaonica (V. kat)
S8. Obstetric surgery	2	Katedra za ginekologiju i opstetriciju - predavaonica (V. kat)
S9. Newborns	2	Katedra za ginekologiju i opstetriciju - predavaonica (V. kat)
S10. Diagnosis and treatment of premalignant cervical, vaginal and vulvar lesions	2	Katedra za ginekologiju i opstetriciju - predavaonica (V. kat)
S11. Case reports. Differential diagnosis. Vaginal and uterine bleeding:	2	Katedra za ginekologiju i opstetriciju - predavaonica (V. kat)
S12. Contraception	2	Katedra za ginekologiju i opstetriciju - predavaonica (V. kat)
S13. Pelvic floor weakness and pelvic floor defects. Urogynecology	2	Katedra za ginekologiju i opstetriciju - predavaonica (V. kat)
S14. Surgical procedures in gynecology and reproductive medicine	2	Katedra za ginekologiju i opstetriciju - predavaonica (V. kat)
S15. Aging and hormone replacement therapy	2	Katedra za ginekologiju i opstetriciju - predavaonica (V. kat)
